

Enclosed three-phase asynchronous motors driven by electronic drive

LSMV

General information

Enclosed 3-phase asynchronous motors, LSMV series, according to IEC 60034, 60072. LSMV motor is the result of Leroy-Somer's experience with speed variation and progress in performance of new electronic controllers.

- Power from 0.25 to 132 kW, frame size from 71 to 315 mm. 2,4 and 6 poles. Three-phase supply 380/415 V, IP 55 protection.

LSMV is at the base of a large motor range for speed variation. Leroy-Somer can also provide FLSES motors with cast iron housing, motors with reinforced mechanical protection and PLSES motors with aluminium housing and IP 23 protection.

The association of MV range motors and of DIGIDRIVE, PROXIDRIVE or UNIDRIVE SP electronic controllers, gives the user the **guarantee of performances** in torque and speed.

Description of LSMV three-phase motors

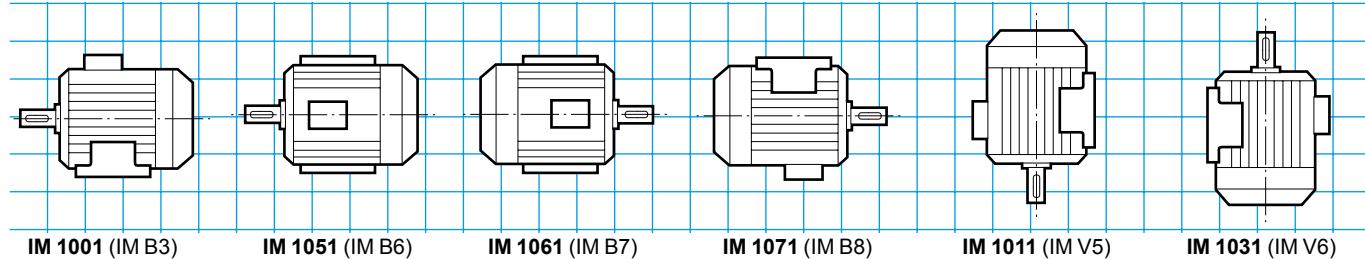

Component	Material	Remarks
Finned housing	Aluminium alloy	<ul style="list-style-type: none"> - with bolt-on or cast foot, or without foot - pressure die casting for frame size ≤ 180 - gravity casting for frame size ≥ 200 <ul style="list-style-type: none"> • 4 or 6 mounting holes for the foot housings • lifting rings frame size ≥ 100 - earth terminal with an optional jumper screw
Stator	Insulated magnetic cover with low carbon rate	<ul style="list-style-type: none"> - the low carbon content guarantees long term stability of the characteristics - semi-enclosed slots - magnetic circuit which is based on experience acquired in frequency variation - impregnation allowing resistance to violent voltage variations determined by high switching frequencies of IGBT transistor drives in accordance to IEC 34-17 - insulation system class F - thermal protection provided by 3 probes CTP (1 per phase)
	Electrolytic copper	
Rotor	Insulated magnetic cover with low carbon rate Aluminium	<ul style="list-style-type: none"> - inclined slots - squirrel cage pressure die cast in aluminium (or alloy for special applications) - mounted on the shaft by heat shrinking and keyed for hoisting applications - dynamically balanced rotor class B for frame size ≤ 132
Shaft	Steel	
Flange bearings	Cast iron	<ul style="list-style-type: none"> - frame size from 80 to 315
Bearings and lubrication		<ul style="list-style-type: none"> - ball bearings lubricated for life for frame size from 71 to 225 - ball bearings regreasable for frame size from 250 to 315 - rear preloaded bearings
Labyrinth seals Lipseals	Technopolymer or steel Synthetic rubber	<ul style="list-style-type: none"> - seal or front deflector for all flanged motors - seal, deflector or heat seal for feet motors
Fan	Composite material	<ul style="list-style-type: none"> - 2 directions of rotation: straight blades
Fan cover	Sheet steel	<ul style="list-style-type: none"> - on request, fitted with a drip cover for operation in vertical position, shaft facing down
Terminal box	Aluminium alloy	<ul style="list-style-type: none"> - fitted with a steel standard terminal board (brass as an optional extra) - terminal box fitted with threaded plugs, supplied without cable gland (cable gland as an option) - 1 earth terminal in all terminal boxes - fixation system cover with captive screws

Enclosed three-phase asynchronous motors driven by electronic drive

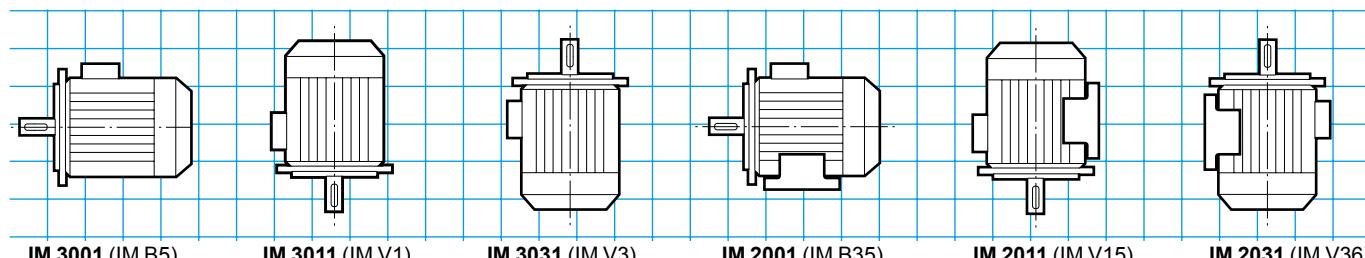

Mounting positions

Foot mounted motors

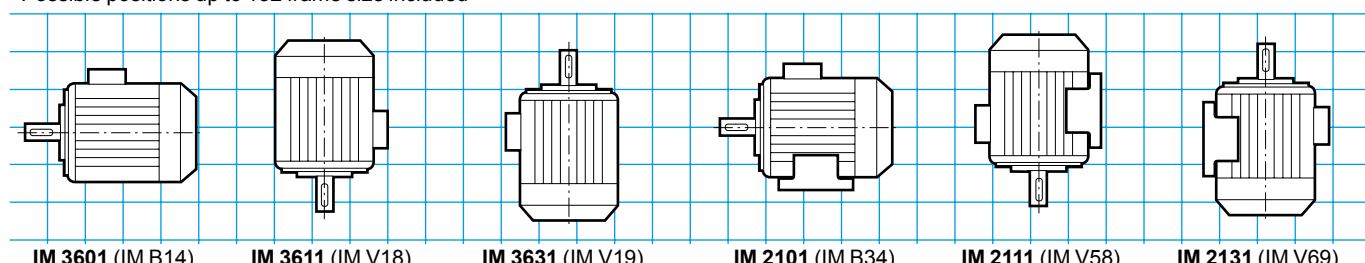

(FF) plain hole flange mounted motors

- Possible position IM 3001 (IM B5) up to 225 frame size inclusive

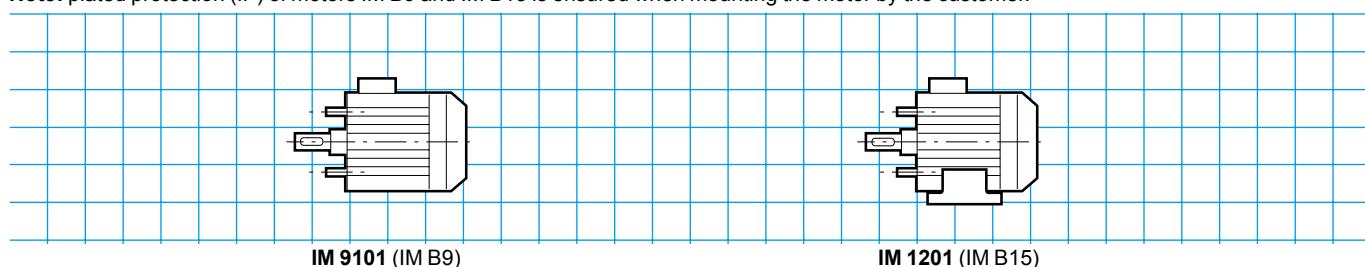

(FT) tapped hole flange mounted motors

- Possible positions up to 132 frame size included

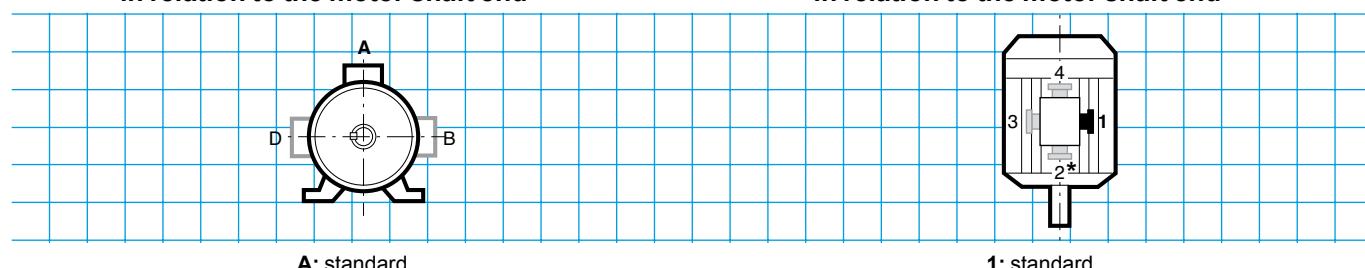

Motors without frontal bearing

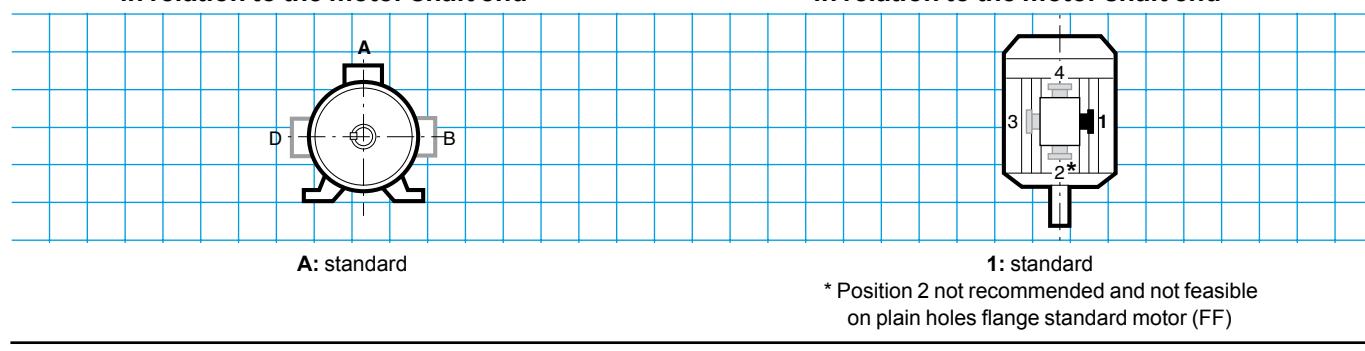

Note: plated protection (IP) of motors IM B9 and IM B15 is ensured when mounting the motor by the customer.

**Position of the terminal box
in relation to the motor shaft end**

**Position of the cable gland
in relation to the motor shaft end**

Enclosed three-phase asynchronous motors driven by electronic drive LSMV

Adaptation possibilities

Leroy-Somer offers, for use with LSMV enclosed three-phase asynchronous motors, many options which meet the needs of highly diverse applications. They are described below and in the chapters relating to the gearboxes and to variable speed.

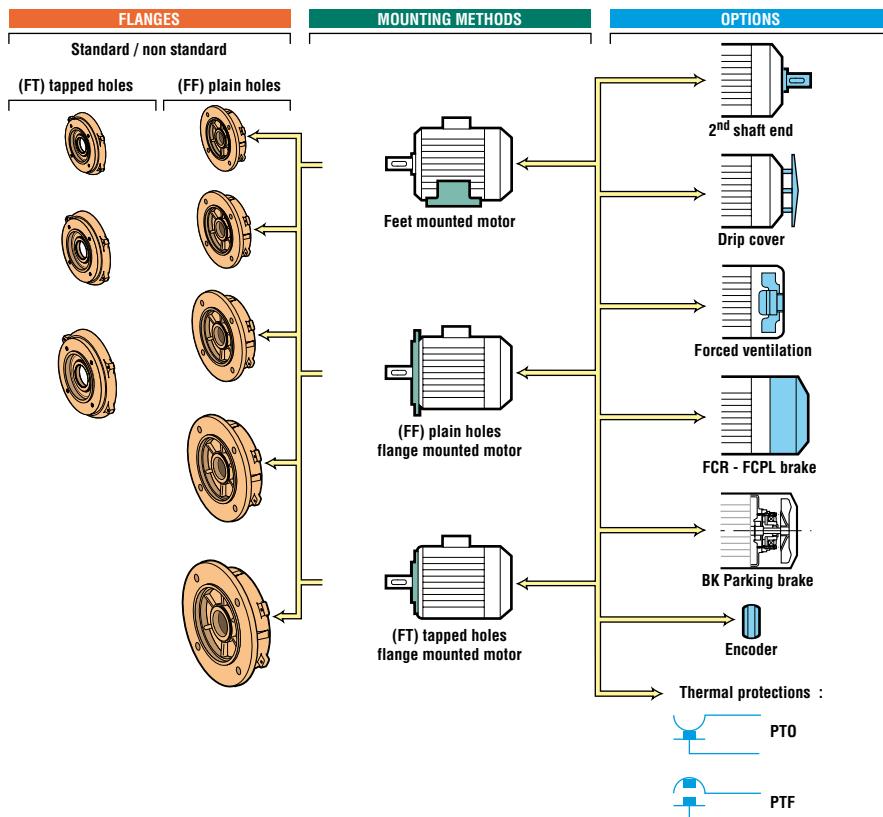

For other variants or any special adaptation, consult the technical specialists at Leroy-Somer.

The LSMV 3-phase asynchronous motors may be associated to:

- gearboxes
- electronic variable speed drive

The options:

- drip cover
- forced ventilation
- second shaft end
- encoder
- rest control brakes: FCR brake, FCPL brake, BK parking brake
- thermal protections
- non standard flanges

Designation / Codification

4P 1500 min ⁻¹	LSMV	100	LR	2.2 kW	LS2 / IE2	IM 1001 (IM B3)	230 / 400 V	50 Hz	IP 55
Speed polarity	Motor type	IEC 60072-1 frame size	Housing designation and builder index	Rated power	Efficiency class	IEC 60034-7 mounting position	Power supply voltage	Power supply frequency	IEC 60034-5 protection

Codification example:
LSMV motor, 1500 min⁻¹, 2.2 kW

IM 1001 (IM B3), 230 / 400 V

Designation
4P LSMV 100 LR 2.2 kW LS2/IE2
IM 1001 (IM B3) 230 / 400 V

Code
4750103

The table above is an example.

It allows the creation of the designation for the required product.

This designation corresponds to a product code.

The product codes that are present in the selection grids can be used directly.

They simplify the ordering process.

The codification table is incorporated in the price list with the designations list.

Enclosed three-phase asynchronous motors driven by electronic drive

LSMV

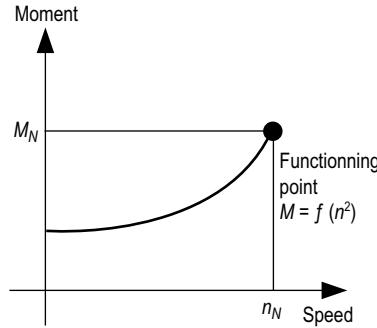

Selection

CHOICE OF MOTOR TYPE AND DRIVE

The integration of the speed variation in a kinematics chain leads to certain constraints divided in two categories:

- needs to application
- example: centrifugal machines

- imperatives due to the association motor / electronic drive: noise, harmonic presence, etc.

LEROY-SOMER proposes:

- **LSES standard range:**

- motors according to IEC standards
- IP 55
- insulation class F
- thermal reserve > 20°C
- balancing level A

Electrical and mechanical construction of the motors respond perfectly to standard applications: ventilation, pump, etc.

- **LSMV range:**

- motors according to IEC standards
- IP 55
- insulation class F
- improved thermal reserve with increased overtorque capacity
- balancing level B for frame size ≤ 132

- protection thermal probes (CTP 150°C)
- terminal box in aluminium
- metal ventilation cover

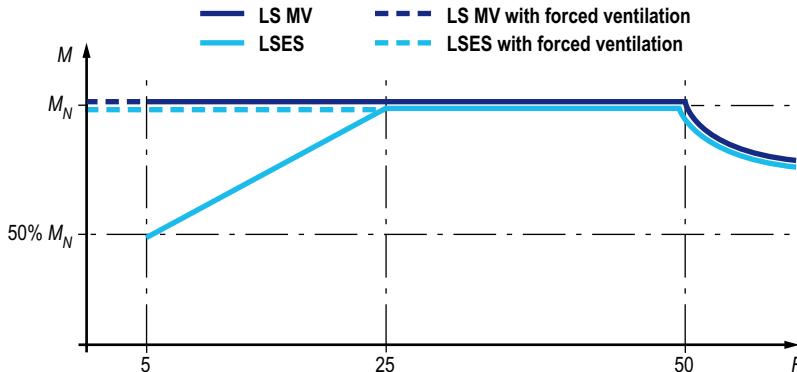

Thanks to a particular conception of the active magnetic side, these motors can respond to most restricting applications: low speed rated torque, even zero.

- **adapted motors construction at very high speed:**

From a drive adapted tuning with constant U/F, these motors can give a proportional power to the speed.

These motors make the object of particular offers.

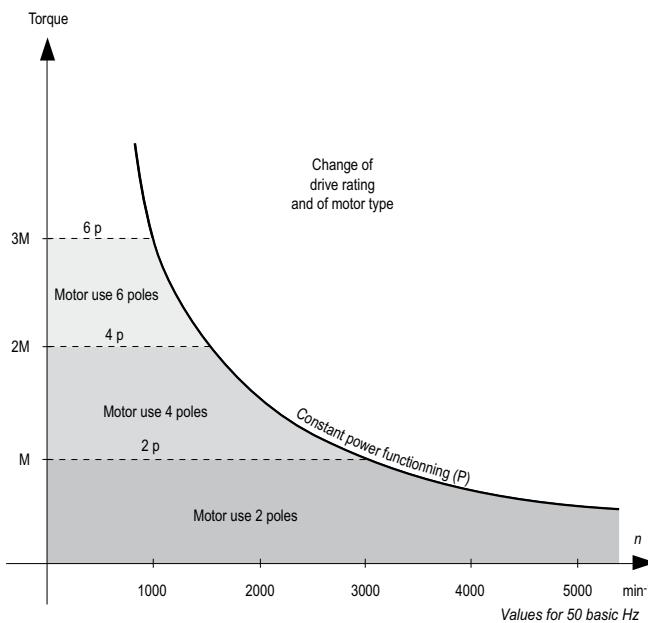

Features thermal torque / speed of LSES and LSMV ranges

CHOICE OF POLARITY

Polarity is one of the main criteria. In fact, as shown in the graph below, the sharing-out of the torques differs depending on the polarity of the used motor. Thus, for use only in low speed, choose a 6 poles motor.

The opposite, for a functioning at high speed 2 poles motor will be selected.

CHOICE OF OPTIONS

Depending to the speed applications and controllers, many accessories are necessary:

Forced ventilation:

- for operation in low speed ($< n_N/2^*$ for LSES motor and $< n_N/10^*$ for LSMV) in continuous duty,
- for operation in high speed (particular study).

Encoder:

- for operation on drive with flow vectorial control,
- for lower speeds $n_N/10^*$,
- for a speed precision required necessary for some of controls.

* n_N = rated speed

Brake:

Brake	Frame size
Type BK	80 to 132
Type FCR	80 to 132
Type FCPL	160 to 250

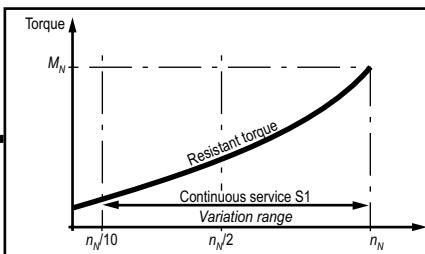

Enclosed three-phase asynchronous motors driven by electronic drive

LSMV

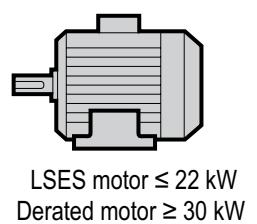

Selection

**Centrifugal
use or
quadratic
resistant
torque**

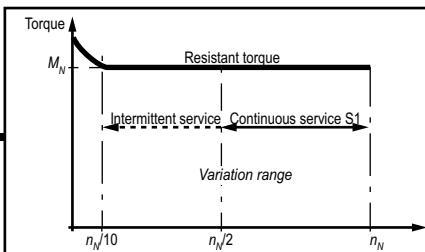

n_N = rated speed

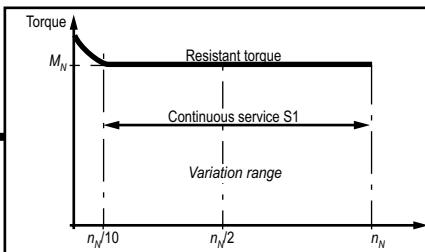

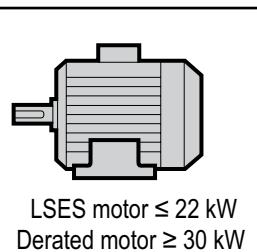

Use on resistant
torques depending
on the speed for
 $f < 50$ Hz

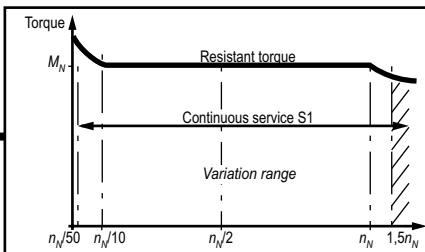

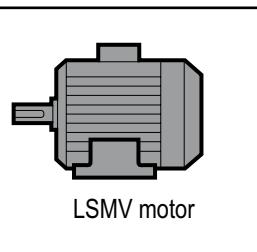

**General
use or
constant
resistant
torque**

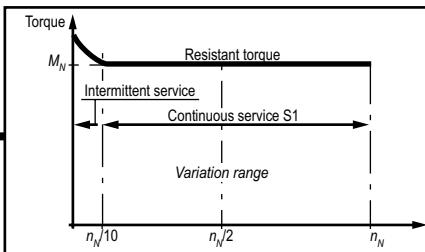

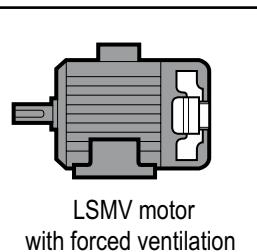

Use on a speed range
from 25 to 50 Hz (1 to 2)
in continuous service (S1)

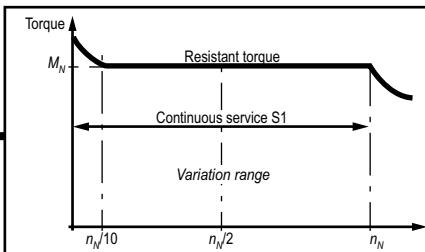

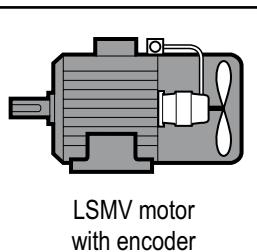

Use on a speed range
from 5 to 50 Hz (1 to 10)
in continuous service (S1)

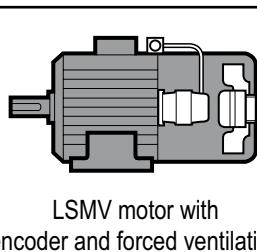

Use on the extreme
speed ranges:
 < 5 Hz and > 70 Hz

Use:
- from 0 to 50 Hz with
a range from 0 to 5 Hz
in intermittent service
- with great speed and
torque dynamics accuracy

Use:
- from 0 to 50 Hz with
a range from 0 to 5 Hz
in continuous service
- with great speed and
torque dynamics accuracy

This guide is general. Performances of the variable speed drives are presented in particular tables.

Shaft end dimensions identical to those of the foot mounted motors.

Enclosed three-phase asynchronous motors driven by electronic drive

LSMV

Options

LSMV MOTORS WITH OPTIONS

Integration of LSMV motors within the process, sometimes requires their equipment with accessories that facilitate their use:

- forced ventilations for use of motors in low or high speed;
- parking brakes to maintain the shaft in stop positions without having to leave the motor switched on;

- emergency stop brakes to immobilize charges in case of fault of motor torque control or powered of due to supply mains fault;
- the encoder which, providing digital information, allows to refine speed and positioning control.

All these options can be combined.

Remarks:

- Without forced ventilation, possibility of overspeed with a balance level "B".
- Surveillance of motor temperature by incorporated probes a windings.
