# Shenzhen Inovance Technology Co., Ltd.

Founded in 2003, A-share listed company, stock code: 300124

Leader of industrial automation control and drive technology in China

Advancing Industrial Technology, For A Better World

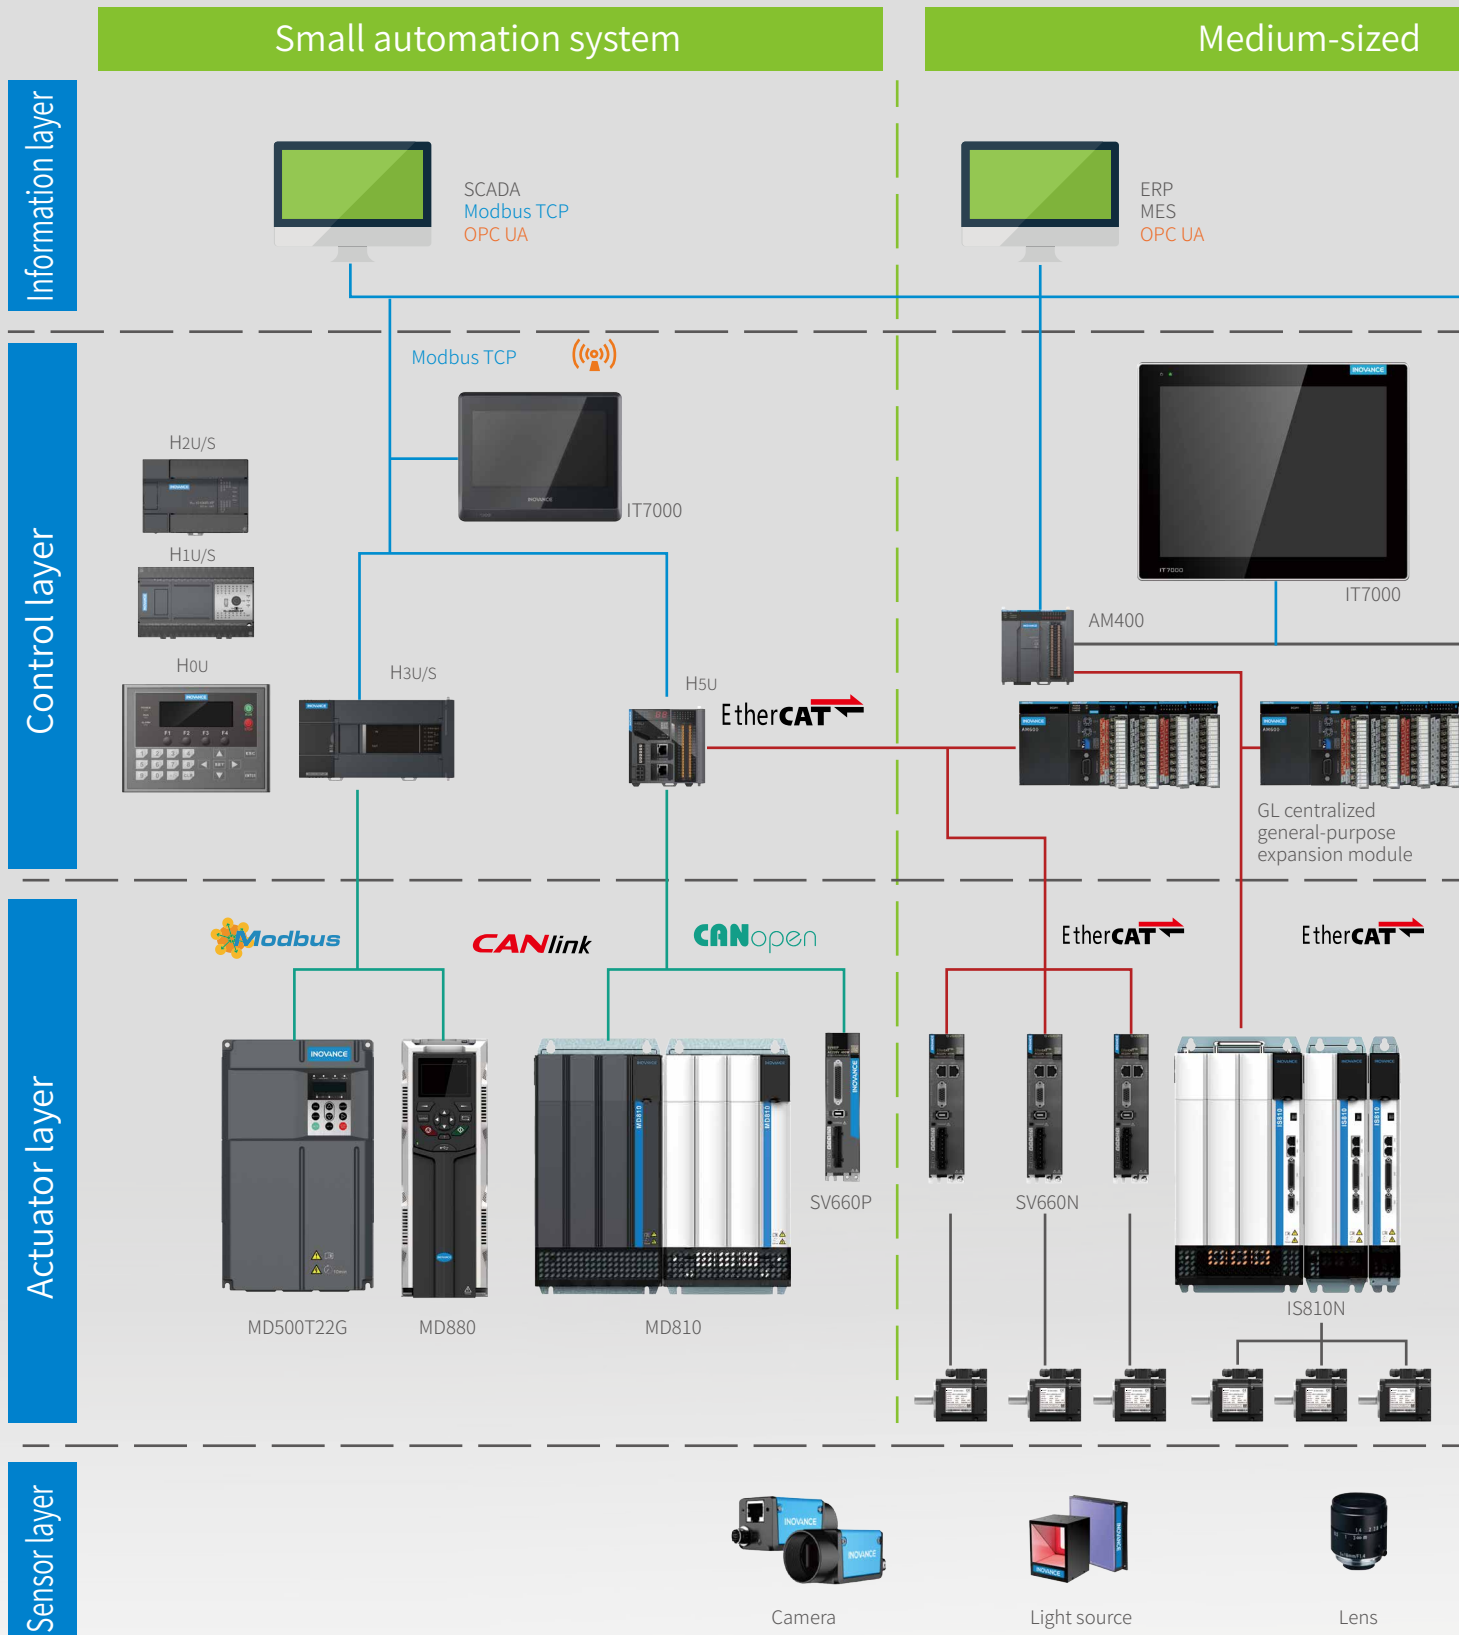

# Shenzhen Inovance Control Technology Co., Ltd.

An industrial automation company controlled by Shenzhen Inovance Technology Co., Ltd., focusing on R & D, production and sales of PLCs, intelligent controllers, HMIs, industry-specific controllers, and providing comprehensive technical support services on controllers. In 13 years since its inception, the company has independently developed a full range of controllers covering micro PLCs, general-purpose small PLCs, high-performance small PLCs, medium-sized PLCs, and intelligent controllers, with multiple I/O configurations and performance classes. The third generation IT7000 HMI provides users with hardware products and control solutions for logic control, process control and high-speed motion control. The company has become a key part supplier and partner of a variety of OEMs, manufacturers of advanced manufacturing equipment for lithium batteries, smart phones, printing and packaging, and TP/LED, and EU users of high-end heavy equipment.

# Inovance's Industrial Automation Product Lineup

Inovance delivers products covering all general automation applications, and provides a complete range of comprehensive solutions based on the information layer, control layer, actuator layer, and sensor layer. The automation system based on Inovance's small PLCs, medium-sized PLC and intelligent controllers has significantly enhanced the competitiveness of a large number of OEMs and manufacturers of lithium batteries, mobile phones, printing and packaging, TP/LED, and semiconductors.

# Introduction To PLC Products

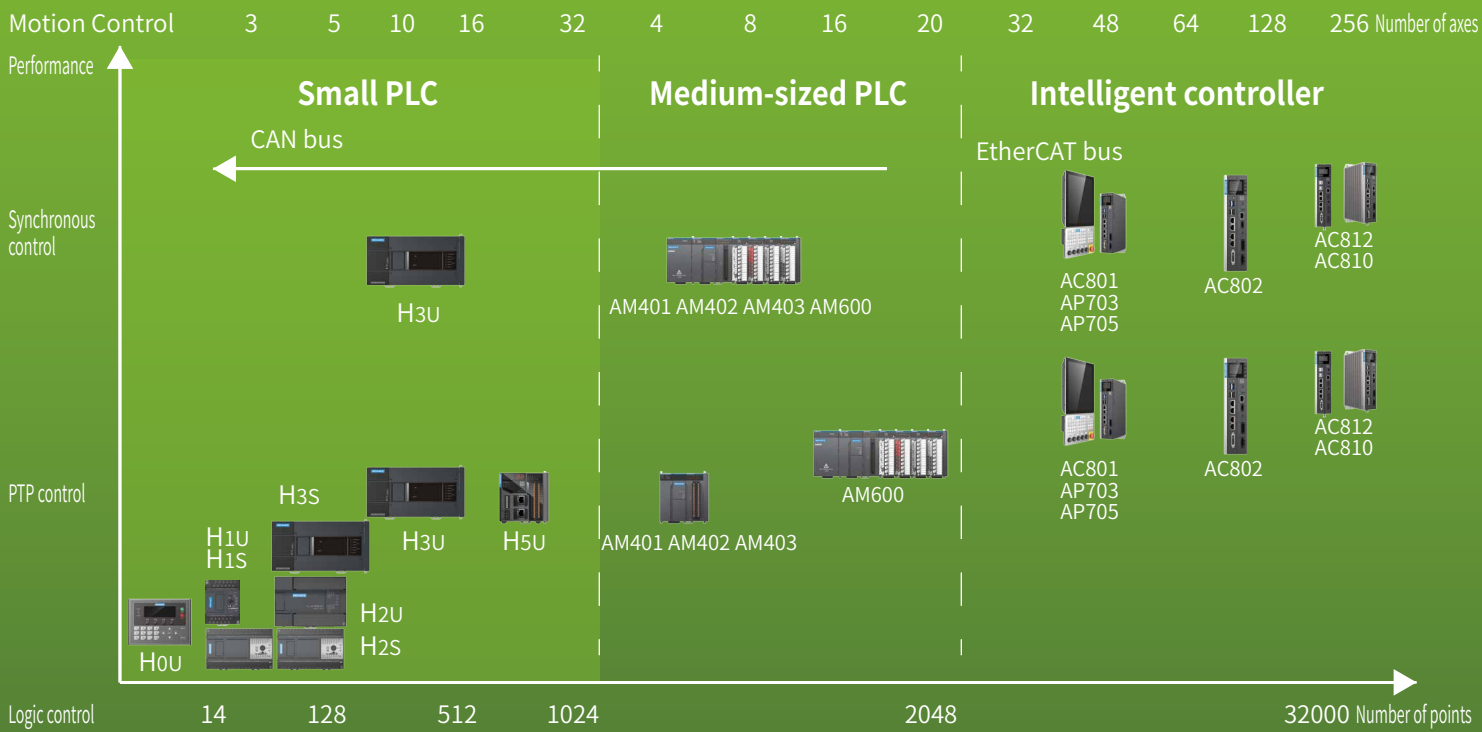

Inovance's PLC products include small PLCs, medium-sized PLCs and intelligent controllers.

The small PLCs, which include H0U, H1U/H1S, H2U/H2S, H3U/H3S, and H5U series, are mainly used in logic control and point-to-point control and supports up to 2048 points and 32 axes.

The Medium-sized PLCs, which include AM400 and AM600 series, are mainly used in motion control. They come with CNC, electronic cam, and electronic gear functions, and support 8-axis synchronous control, 20-axis PTP control, and 2048-point I/O logic control.

The intelligent controllers, which include AP700 series display and controller integration and AC800 series booksize high-performance products, are mainly used in multi-axis motion control. The AP700 series with built-in CNC function is adaptable to machine tool equipment control. It support up to 32-axis synchronous and PTP control. The AC800 series is designed for the control of large and complex mechanical equipment, and supports up to 256-axis synchronous and PTP control.

## PLC product family

# Introduction to Inovance HMI products

## HMI product family

The HMI products include the IT6000 series and IT7000 series. They are sized from 4.3" to 15".

While perfectly adapted to Inovance's PLCs, AC drives and servos, they are also compatible with the products from major manufacturers.

The new-generation IT7000 series delivers perfect data visualization and responsive operation. It caters not only for operation and monitoring of common small equipment, but also for that of complex equipment and production processes. It is cost-effective.

# AC800 Series

## High-performance intelligent controller

## High-end controller with powerful computing performance

- CPU: Intel Core i7, i5, or Celeron series.
- Support for 6 PLCopen-compliant programming languages.
- System software: PLCopen + CAM + CNC + ROBOT.
- AC810 dual EtherCAT master network: 32 axes at 500 us EtherCAT period; 256 axes at 4 ms EtherCAT period.
- EtherCAT bus I/O expansion support up to 32000-point high-speed I/O expansion and common DI/DO expansion.
- Multi-layer networking due to support for multiple communication protocols including EtherNet/IP, OPC/UA, and ModbusTCP.
- Use with legacy equipment through built-in ModbusRTU master/slave protocol and 2 separate communication interfaces RS485 and RS232.

### Multi-axis synchronous motion control

- Functions: sync-enabled manipulator, CNC, electronic cam, and electronic gear.
- High precision: jitter within 30 us

### Edge computing carrier

- Powerful computing performance due to i7 + 128GSSD + 4GDDR
- Data processing library: used for big data processing, file processing, and production line data collection and processing

### Integrated industry process library

- General instruction library, packaging process library, silicon crystal industry library, lithium battery process library (square winding) ...

# Ports

# Product Specifications

Item	AC812	AC810	AC802	AC801
Processor	Intel i7, 2.7GHz	Intel i5, 2.5GHz	Intel Celeron, 1.6GHz	Intel Celeron, 1.6GHz
Memory	DDR4-4G	DDR4-4G	DDR4-4G	DDR4-4G
Hard Drive	SSD128G	SSD128G	SSD128G	SSD64G
Display and Interface	DVI-D Built-in system status display module, 128 x 64 dot matrix, 4 buttons			
Ethernet LAN	LAN x 2, for Modbus TCP, UDP, and OPC UA			
EtherCAT Bus	EtherCAT master x 2	EtherCAT master x 2	EtherCAT master x 2	EtherCAT master x 1
Axis Capacity	128 + 128 axes	128 + 128 axes	64 + 64 axes	48 axes (32 axes at 1 ms period)
USB Port	USB 2.0 x 2; USB 3.0 x 2			
Serial Port	RS485 x 1; RS232 x 1			
DI	3, for input of system function signals			
DO	2, for output of system status indication signals			
Cooling Fan	2 long-life fans	2 long-life fans	None	None
User Program Capacity	128 MB	128 MB	128 MB	128 MB

# AC800 Applications

## Rotary die cutting machine

### Leading core technology algorithm

Keywords:

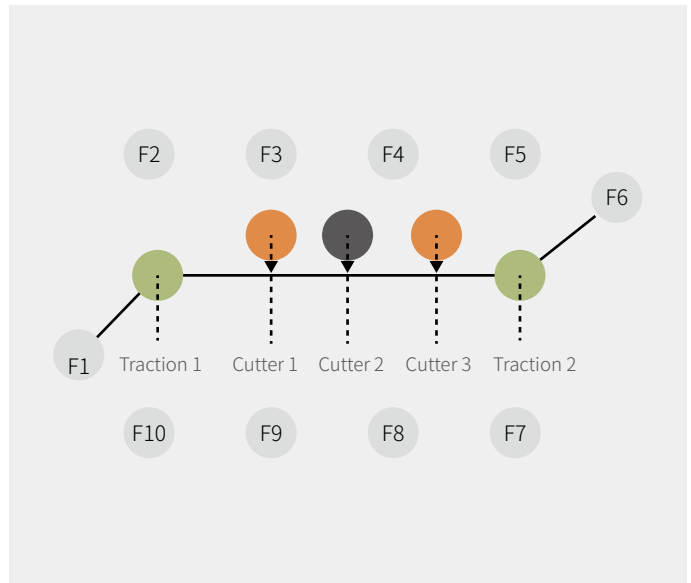

**AC810, common DC bus servo, high-speed probe, synchronization performance, 35-axis synchronous control**

Convenient installation and maintenance, and energy-saving

Sync: 60 m/min; accuracy:  $\pm 0.05$  mm

Async: 25 m/min; accuracy:  $\pm 0.1$  mm

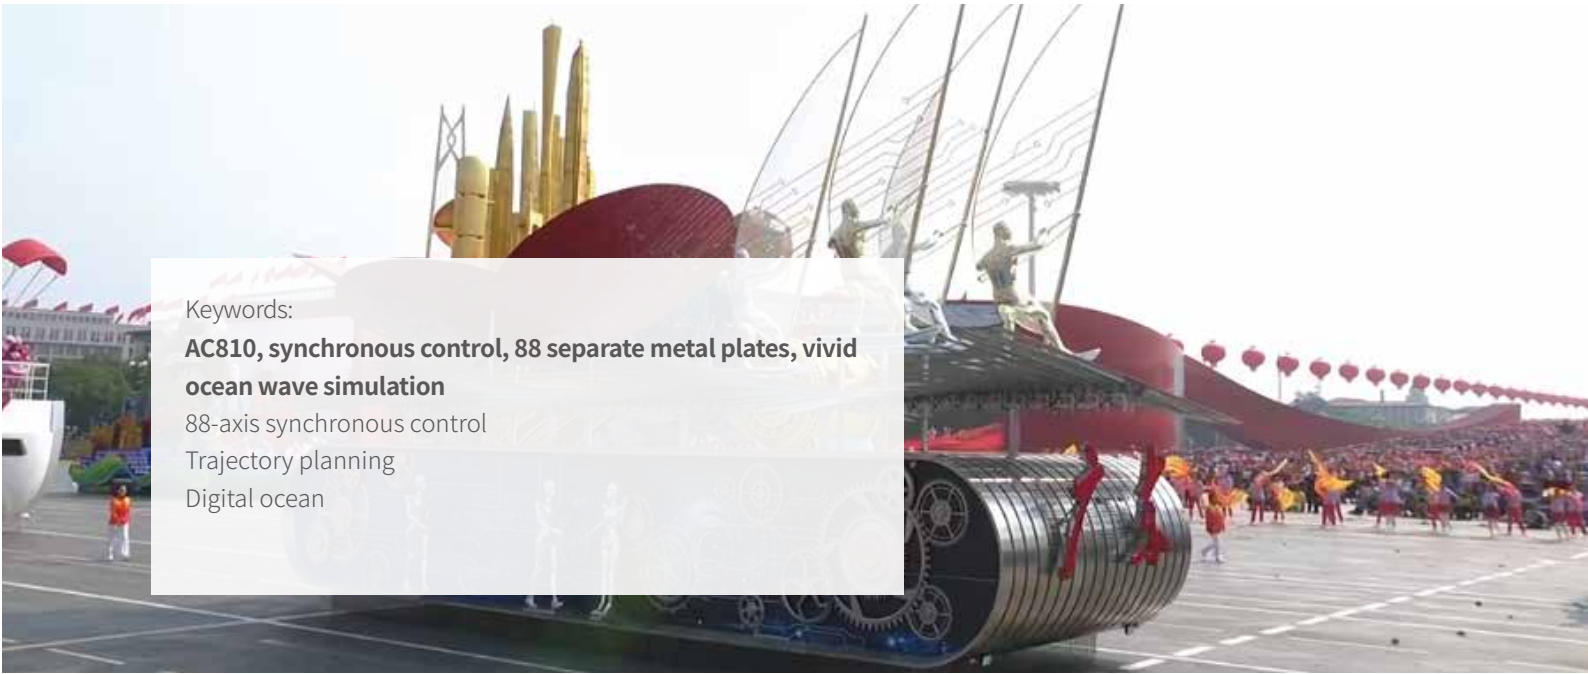

Tension control accuracy: 1 N

## National Day Parade floats

# Extreme multi-axis synchronous control stability

# AC800 Applications

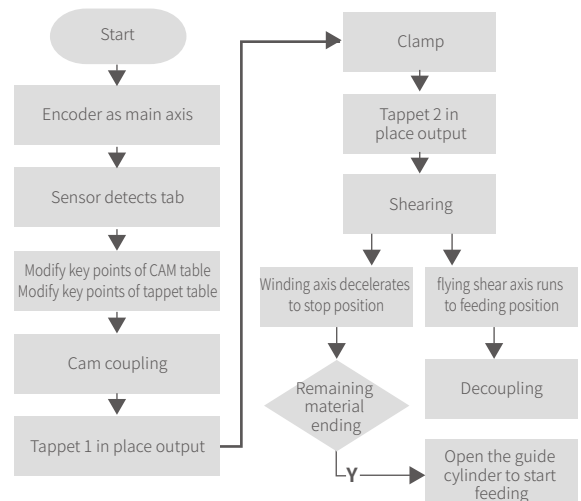

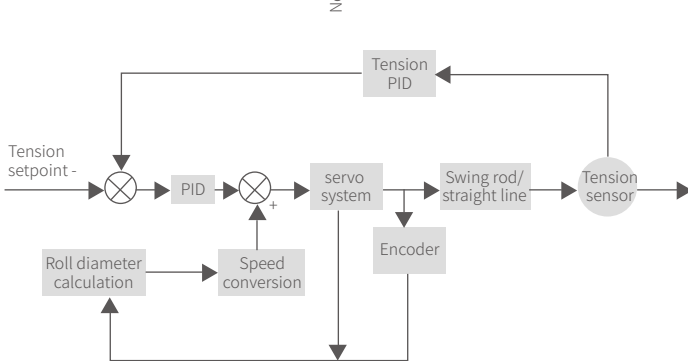

## Square lithium battery winding machine

### Tab-forming and winding integration solution brings high efficiency

The square lithium battery features simple structure, light weight accessories, and high energy density. Square battery manufacturing involves two different processes: winding and stacking.

In the winding control, tension is controlled by moving the battery electrode film and the insulating film at a uniform speed through the non-uniform rotation of the winding needle. In this way, product quality and winding efficiency are improved. A cam motion control algorithm with a virtual main axis is used in the control program. The winding control also involves tab alignment, diaphragm web guiding, and tension control. The high-speed movement of the diaphragm requires extreme fast computation speed of the controller. The AC810 controller, which provides large load rate margin, is a perfect match for this purpose.

Control system structure

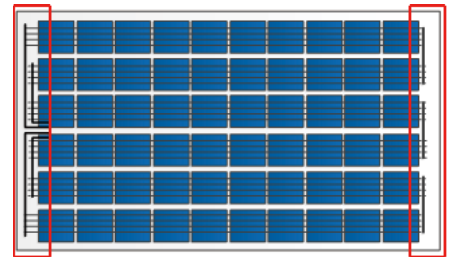

# Bus ribbon automatic soldering machine

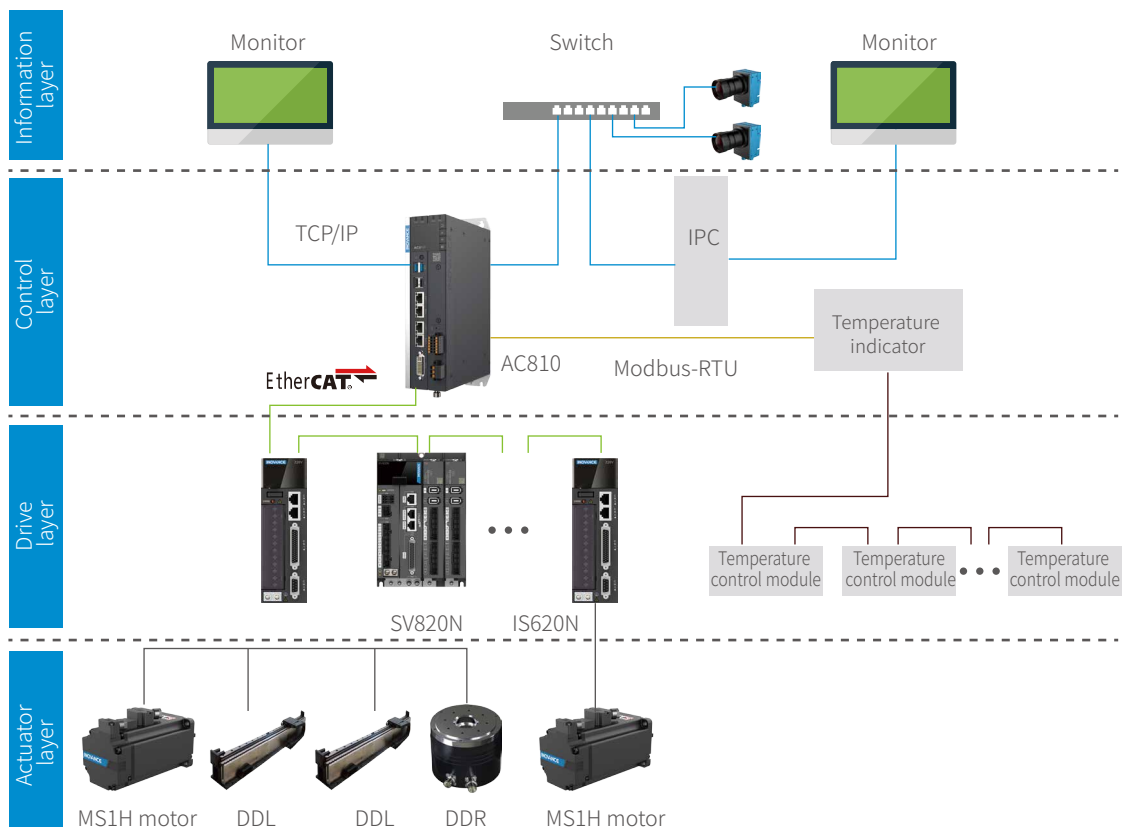

## Multi-station overall control greatly reduces labor costs

In photovoltaic panel production, small pieces of solar panels need to be connected in series by welding to form a photovoltaic panel. Traditionally, the welding is carried out manually, with low efficiency and poor quality consistency. The AC810 controller allows for automatic welding. The part in the red rectangle as shown in the right figure is to be soldered:

In the bus solder solution, An AC810 controller, which integrates motion control and logic control, is used to control 65 servos through an EtherCAT bus in a flexible and high-speed manner. A DDL motor is used for key axes such as the soldering station and a DDR motor is used for scenarios that require high torque, high precision and alignment. This solution can replace 3 skilled workers and significantly improve production efficiency and quality by completing half-cell module soldering, conventional soldering, and double-glass module soldering in 25s respectively.

### Control system structure

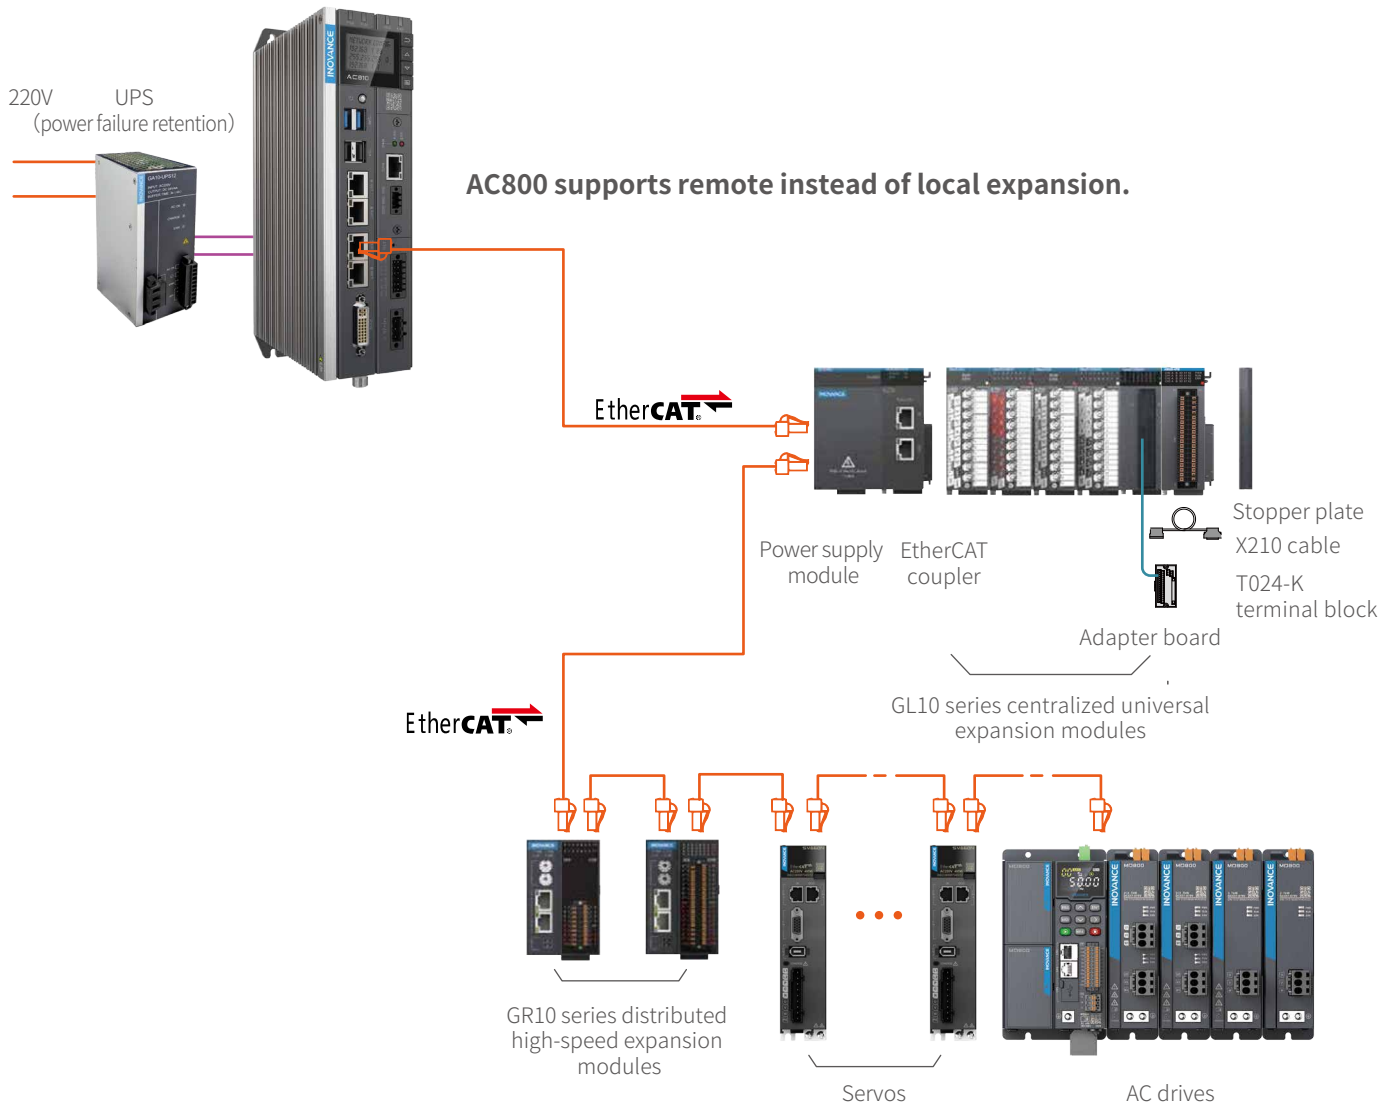

### Construction of control system

AC810 + IS620N \* 65, including 29 common servos, 24 DDLs and 12 DDRs.

### Benefits

The traditional process requires 3 skilled workers. Inovance's bus soldering solution replaces these workers with a complete process system based on the EtherCAT bus solution and the AC810 high-performance bus controller. Improvement in productivity, efficiency, stability and ease-of-use.

# AP700 Series

Display and controller integrated intelligent controller

## All-rounder in machine tool applications

- Visual programming interface.
- Intel x86 high-performance processor, integrated display and control.
- Min. bus period 500  $\mu$ s; multi-axis motion control synchronizes 16 axes in 1 ms.
- 15" resistive touch screen.
- Visual programming with InoProShop.
- Fan-free design for a wide operating temperature range.

### Modular technology platform

- Built-in T7000-based CAM control
- Built-in CNC, PLC, HMI functions
- Support for multi-channel multi-station simultaneous interpolation
- Support for I/O control with EtherCAT bus expansion

### Controllable trajectory

- Synchronization between PLC and HMI; support for G code visualization and programming
- Generates trajectory control programs directly from DXF and DWG files
- Direct fine-tuning on the HMI improves trajectory accuracy for shape processing

### Integrated automatic loading and unloading

- Support for auxiliary axis control (electronic cam, electronic gear, PTP control)
- Integrated manipulator control model

# Features

# Product Specifications

Model	AP703
Processor	Intel x86 1.6 GHz dual-core processor
Memory	DDR4G/8G    SSD64G
Bus	EtherCAT master×1 EtherNet×1 USBx4
OS	Linux/RT
Serial communication	RS485×2
HMI	IT7000
Max. number of axes	48
Monitor	15-inch TFT, resolution 1024×768, resistive
Dimensions (W * H * D)	351.9mm × 278.9mm × 66.5mm (13.85" × 10.98" × 2.62")
Hole size (W * H)	338mm × 265mm (13.30" × 10.43")

## EP700 Series

### Smart controller

The EP700 series intelligent controller is AP700's counterpart in the **hydraulic industry**.

- EP700 retains the powerful real-time synchronization function of AP700, and rivals major international products in terms of control accuracy and interface operation experience.
- The open platform effectively improves the reusability of standard programs and enables secondary development for users. The core process encryption and encapsulation and big data storage functions enhance equipment competitiveness.

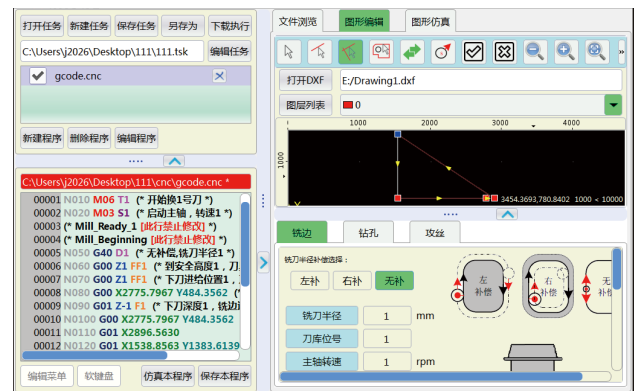

# AP700 Applications

## Drilling, tapping and plane milling controller

### Easy-to-use graphic-text analysis

This solution employs an Inovance AP700 controller, 6 Inovance IS620N servo drives, and the EtherCAT technology. This solution comes with CAM auxiliary software which enables G code generation with mouse clicks. Users need not to learn complicated CAM software, such as UG, PRO-E, and MasterCAM.

- Beginner-friendly integrated controller
- Real-time EtherCAT bus control
- Open architecture allows for quick customization of the UI or control

## Five-axis polishing grinder

### Intelligent model analysis significantly improves machining accuracy

Keywords: AP702, CNC file reading, editing, teaching, execution, RTCP and grinding wheel tool compensation, import DXF files, one-click generation of G codes, customer core technology encapsulation.

- Processing accuracy:  $\pm 0.01$  mm
- Repeated positioning accuracy: 0.01 mm
- Idle speed: 500 mm/s
- Operating speed: 300 mm/s

## Friction stir welding

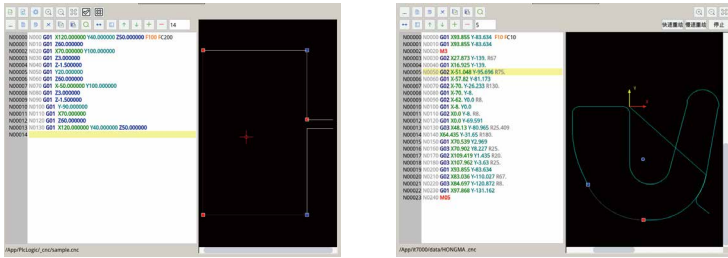

# Cost-effective controller enables customizable manufacturing process

Keywords: AP702, five-axis linkage, RTCP numerical control function, G code analysis, CNC interpolation, axis coordinate transformation control function block, IT7000 industry-specific controls, fast delivery

The user can import DXF graphics and specify the processing trajectory. G codes will be automatically generated

G-code graphic-text editing

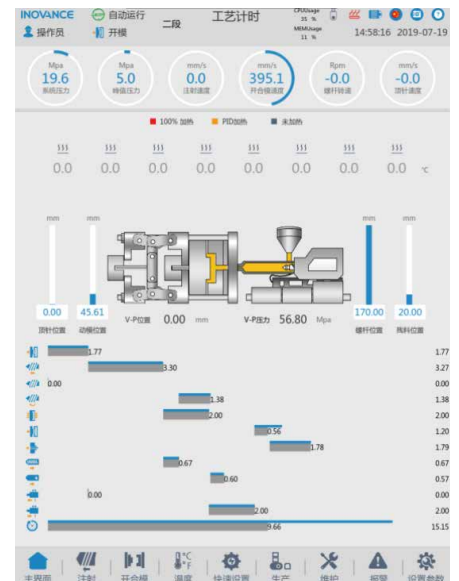

Graphical simulation and real-time monitoring of processing trajectories

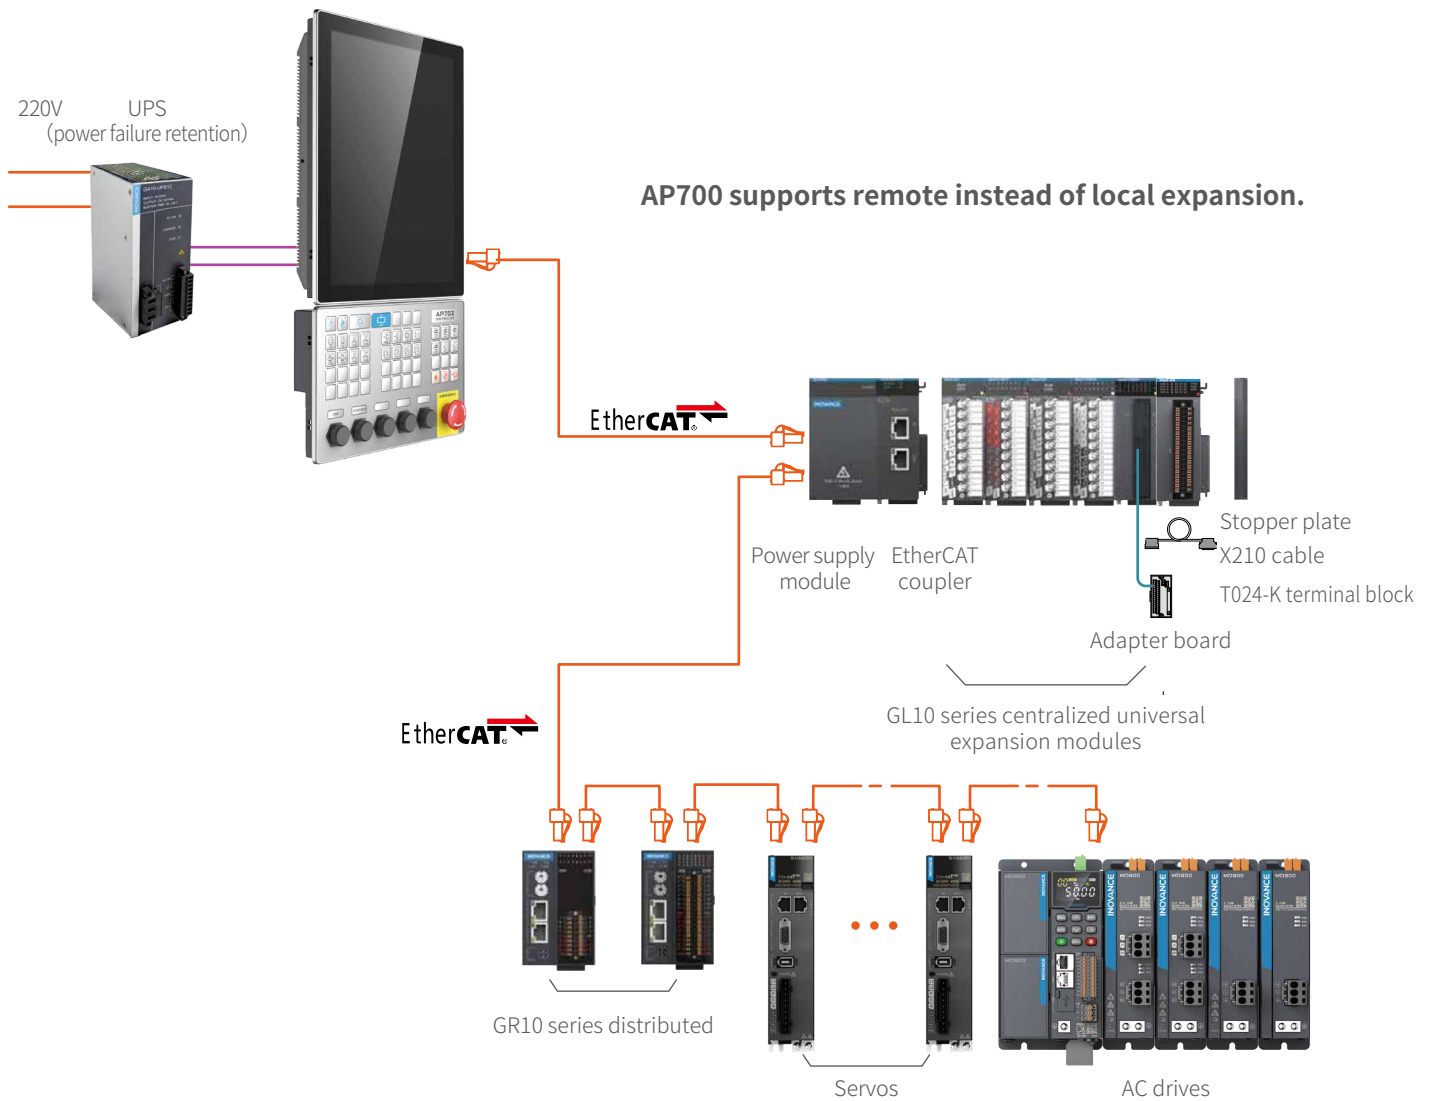

## Hydraulic industry-all-electric injection molding machine system

# Cell production and integrated equipment control ensures improved production efficiency

Elegant UI, powerful real-time synchronization, high-precision trajectory control, XYZ synchronous control, and integrated back-end robot control model for automatic loading and unloading. Loading + processing technology + unloading, palletizing and packaging, all in one controller.

# AM400/AM600 Series

## General-purpose medium-sized PLC

- 10 M program capacity and 20 M data capacity.
- EtherCAT axis control: 20 axes for AM600, 16 axes for AM403, 8 axes for AM402, and 4 axes for AM401, and 2 axes for 1 ms synchronization.
- Support for PLCopen motion control instructions (electronic cam, electronic gear, interpolation), and coordinate transformation instructions.
- Ethernet or USB-based monitoring and commissioning, compliant with IEC61131-3.
- The main unit comes with 16 high-speed inputs and 4 pulse outputs.
- Various bus networks: support for EtherCAT, CANopen, CANlink, EtherNet: ModbusTCP master-slave protocol, FreeTCP, 2 RS485: ModbusRTU master-slave protocol.

### One-stop solution

- EtherCAT-based bus motion control.
- Provides serial port and CAN interface; supports expansion with both CANopen and EtherCAT; one-stop service thanks to distributed I/Os.
- The main unit supports up to 16 modules locally.

### Powerful motion control

- PLCopen-based motion control platform
- Combination of virtual and real axes allows for a distance of up to 100 m between two servo slaves.
- Support for CNC/ROBOT function based on G instructions.

### A variety of options

- 16-bit analog input and output, high precision temperature control module, DI/DO module (NPN, PNP transistor output, relay output), distributed IO communication module.

# AM400/AM600 Applications

## High speed packer

### Full electronic cam solution improves efficiency

Keywords: AM600, synchronous control of pull-down, vertical sealing, horizontal sealing, cutting with 5-axis full electronic cam, high-speed and low-noise

120 packs/min; follow accuracy  $\pm 1$  mm

## Multi-wire saw

# Industry standard core tension control and wire arranging algorithm

Keywords: AM600, 12-axis synchronous control, multi-main axis load distribution and two-axis cam cable arranging process block, linear speed increased by 50%, tension fluctuation  $\pm 0.5$  N, best in the industry

Cutting line speed 1800 m/min  
Line tension fluctuation:  $\pm 0.5$  N  
Swing lever swing angle:  $\pm 1^\circ$   
Acc./dec. time: 3s

# Model Selection

Max. 16 local expansion modules

# H5U Series

## EtherCAT bus high-performance small PLC

## One step ahead

- EtherCAT-based wiring on the entire network saves wires and troubleshooting time. Only one controller will be enough for a complex assembly.
- Direct commissioning instead of commissioning in the servo background. Servo motion positioning can be free from programming.
- Programming supports function block and library encapsulation, facilitating encapsulation and reuse of technology.
- Customization of variables in Chinese and English, as well as direct communication with Chinese variables of IT7000 touch screens, help accelerate the programming.

### Simplified Motion Control

- 32-axis EtherCAT motion control, 72 EtherCAT slaves.
- PLCopen-compliant axis control.
- Local pulses and EtherCAT axes share the same motion control instructions.
- Supports cam and interpolation.

### Fast Programming

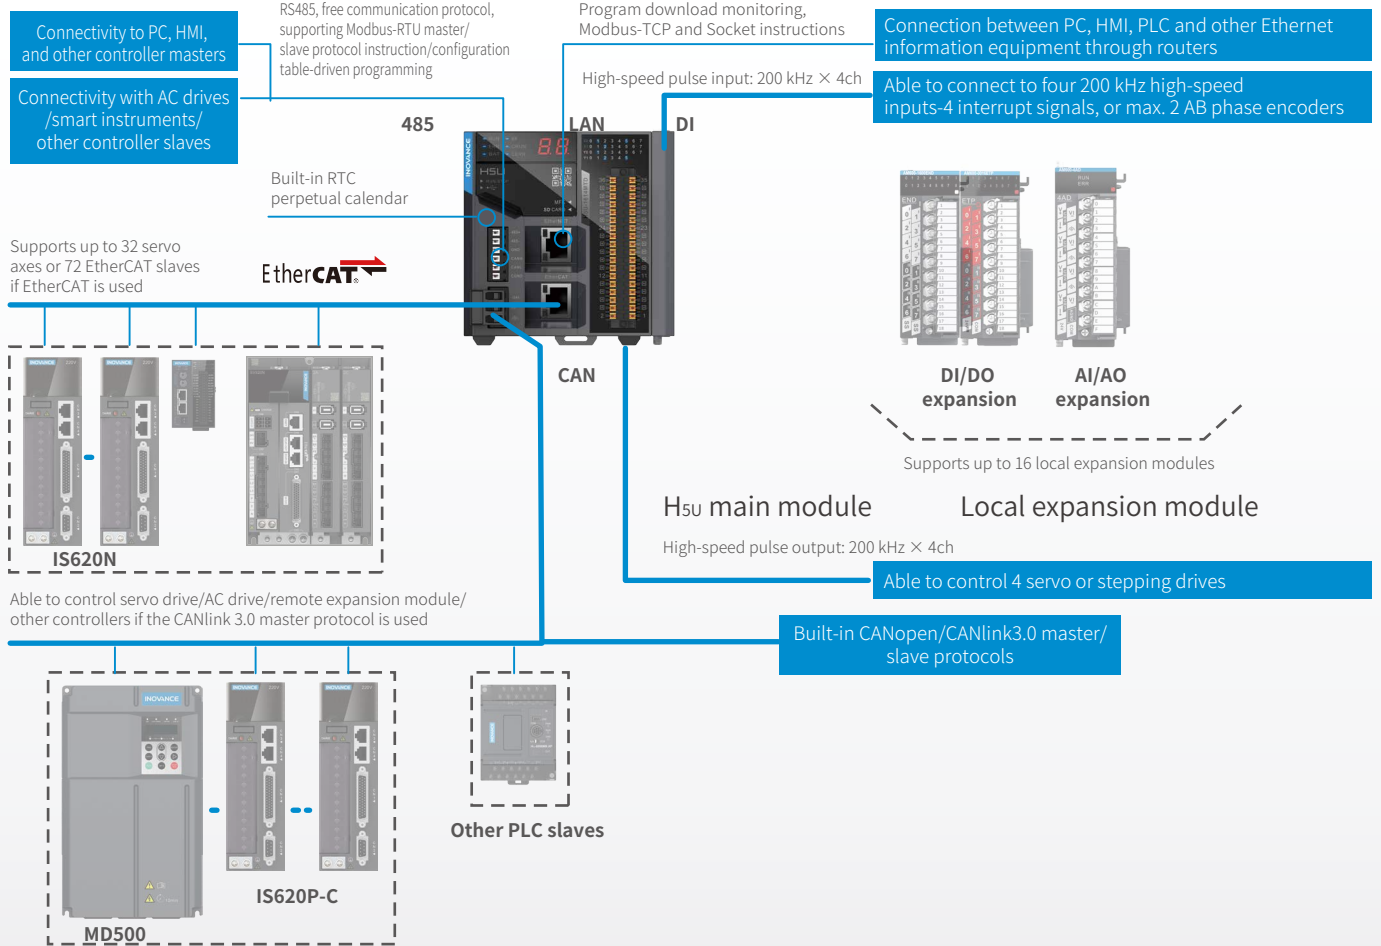

- Supports function block and library encapsulation for encapsulation and reuse of technology.
- The wizard-based configuration enables different communication functions.
- Supports direct communication with Chinese variables of IT7000 touch screens.

### Fast Delivery

- EtherCAT-based wiring on the entire network saves wires and troubleshooting time.
- Supports Ethernet, CAN, 485, and EtherCAT multi-level network communication. Only one controller will be enough for a complex assembly.
- Easier to use Inovance servo AC drives by implementation of plug and play.

# Features

Model	H5U series high-performance EtherCAT bus small PLC (mainly for EtherCAT axis motion control)
Axis Capacity	32 axes (including EtherCAT axes and local pulse axes in use of the same instructions) (8-axis and 16-axis versions are also available.)
Communication Interfaces	EtherCAT x 1: max. 32 axes and 72 EtherCAT slaves (including servo axes) EtherNET x 1: MODBUS-TCP, TCP/IP, UDP CAN x 1: supporting CANlink and CANopen configuration (supporting CANopen instead of CANlink axis motion control) RS485 x 1
Program Capacity	200 K-step user programs
Data Capacity	2 MB user-defined variables, of which 256 KB supporting power failure retention Approx. 150 KB soft elements, of which No. 1000 and above supporting power failure retention
Programming Languages	Basic instructions: 20 ns; 20 K-step logic instructions: 2 ms
Basic Instruction Rate	LD and SFC, supporting FB/FC (ladder diagram function block)
High-Speed I/O	Four 200k high-speed inputs (2 encoder counting) 4-axis 200k high-speed output (4-axis pulse output)
General I/O	16 inputs and 14 outputs (including high-speed I/Os)
Module Expansion	16 modules; remote modules can be connected as EtherCAT slaves.
Power Input	24 VDC
Other Interfaces	miniUSB, SD card
Dimensions	83 x 95 x 90 mm (L x W x H)
Additional Info	Supporting linear and circular interpolation, cam, and offline simulation (cam and interpolation can be used together for pulse axes and EtherCAT axes)

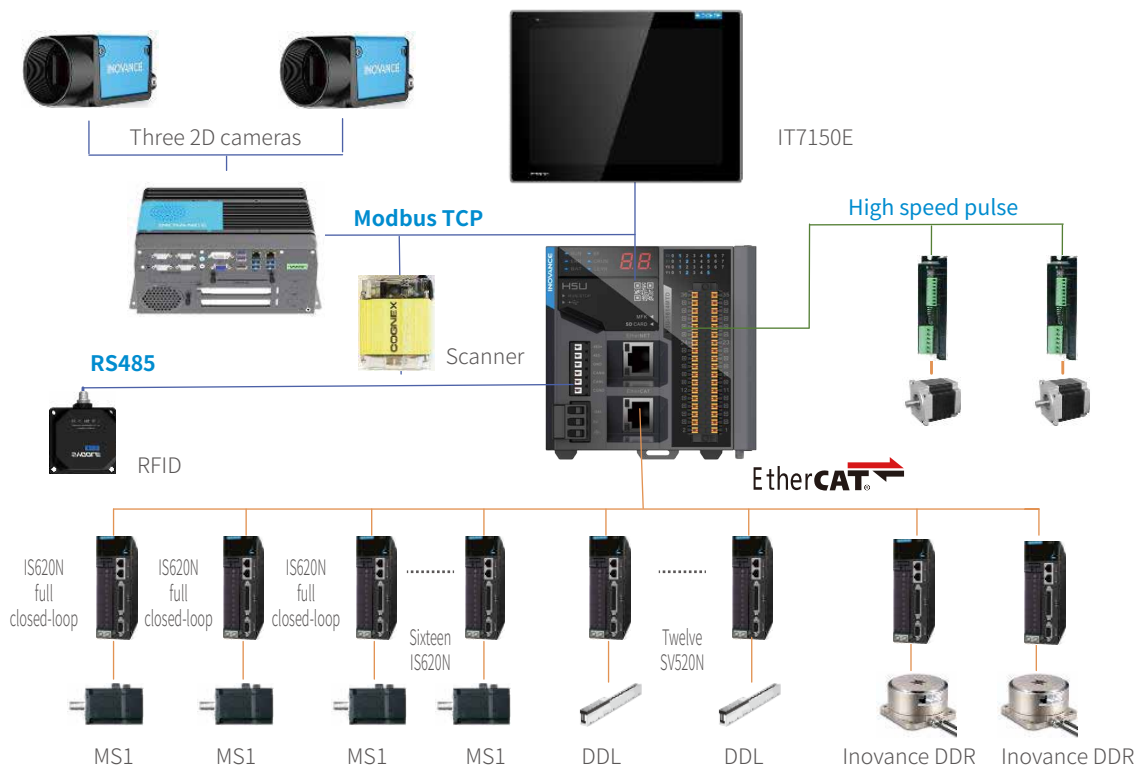

# H5U Applications

## Visual alignment binding equipment

### Improved programming efficiency with function blocks, structures and user-defined variables

Inovance provides a multi-vision assembly equipment solution where the H5U high-performance small PLC is used as the main controller. The H5U high-performance small PLC can connect to 30 axes through the EtherCAT bus, including 12 linear motors and 2 DDRs, and connects to 2 stepper motors through local high-speed pulse. It is programmed by the function blocks encapsulated by the EtherCAT axis control instruction. It supports information exchange between three 2D cameras and one code scanner through the Socket instruction. It also supports RFID communication through the RS485 communication configuration.

H5U has the same capability of a medium-sized PLC. It allows for eightfold efficiency increase compared to the conventional semi-automatic + manual mode. It also enables 60% efficiency increase in programming by providing structures and user-defined variables.

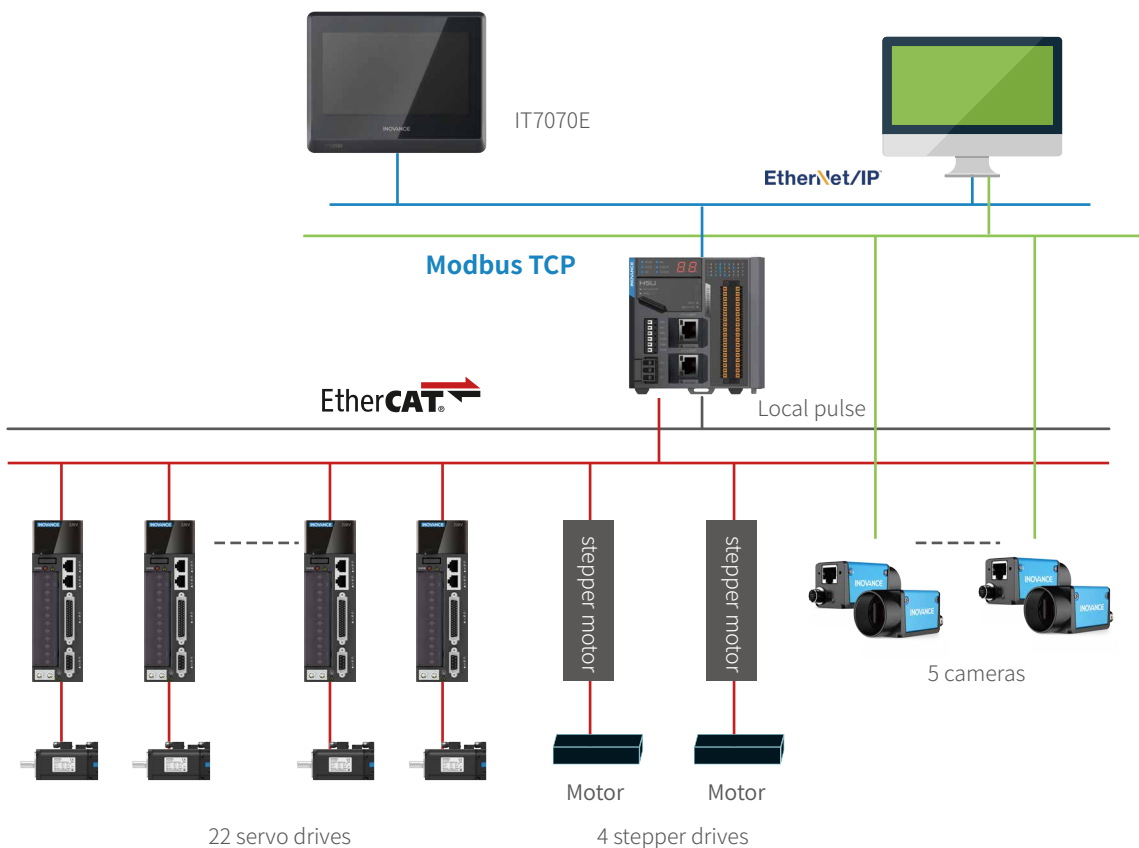

## Electronic non-standard labeling machine

# EtherCAT multi-axis PTP control enables rapid delivery

An Inovance H5U controls 22 IS620N servo drives through the EtherCAT bus, and the programming is implemented through Inovance EtherCAT axis control encapsulation instructions. 5-camera visual alignment and CIM system data exchange enabled by AutoShop communication settings. Probe instructions allows for high-speed position latching of the encoder connected to H5U. Function block reuse and subroutine call significantly increase programming efficiency.

Production efficiency: 2.5s/pcs, 1440pcs/h; mounting height  $0.2 \pm 0.15$  mm; mounting width:  $0.23 \pm 0.15$  mm; CPK: min. 1.33, without deformation and scratches.

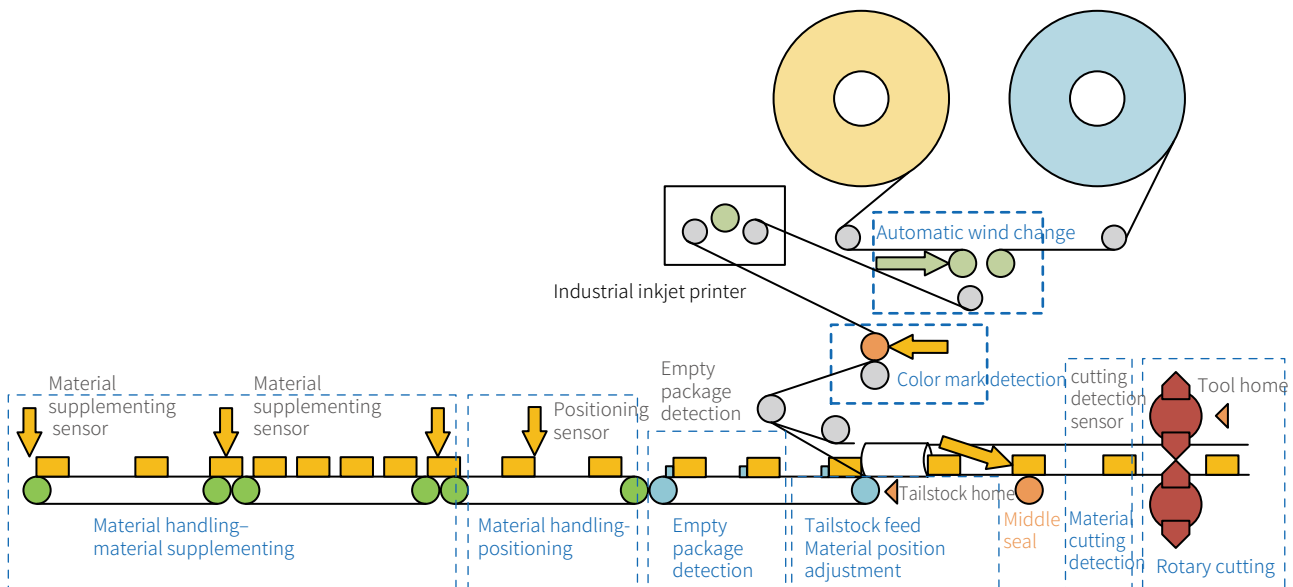

# H5U Applications

## Tri-Servo Flow Wrap Machine

### Cam gets manufacturing equipment to move faster

This solution uses Inovance H5U series PLCs. Electronic cam controls the cutting tool axes for rotary cutting. Probes collect color marks for compensation, ensuring marking accuracy and bag length accuracy. The solution adopts standard encapsulation by encapsulating core processes into libraries for reuse. For standard tri-servo flow wrap machines, customers are free from additional programming by using the plug-and-play controller.

## H5U Solution Advantages

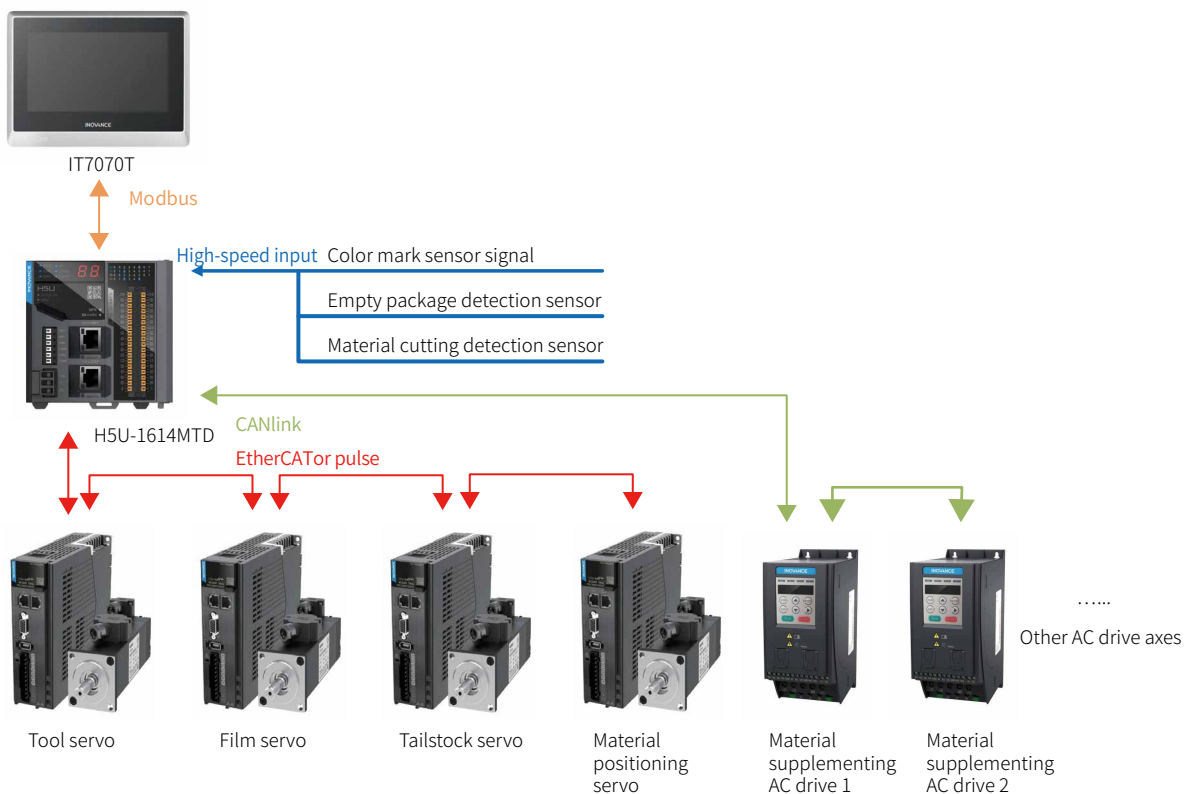

- Pulse+bus dual support for cost-effective local pulse control and advanced EtherCAT bus control. Applications including the material handling line can be extended through the bus. Only one controller will be enough for a distributed electric cabinet.
- Supports electric cam, electric gear, phase shift, position overlay, and probe sampling for better motion control.
- Supports virtual axes, encoder axes, bus axes, and pulse axes. Bus axes and pulse axes use the same set of axis control instructions.
- Supports for function block and process library encapsulation. Key processes including color mark and flying knife can be encapsulated into libraries and reused for subsequent development.
- Supports program offline simulation and axis online commissioning to reduce field commissioning workload.

## Tri-Servo Flow Wrap Machine Specifications

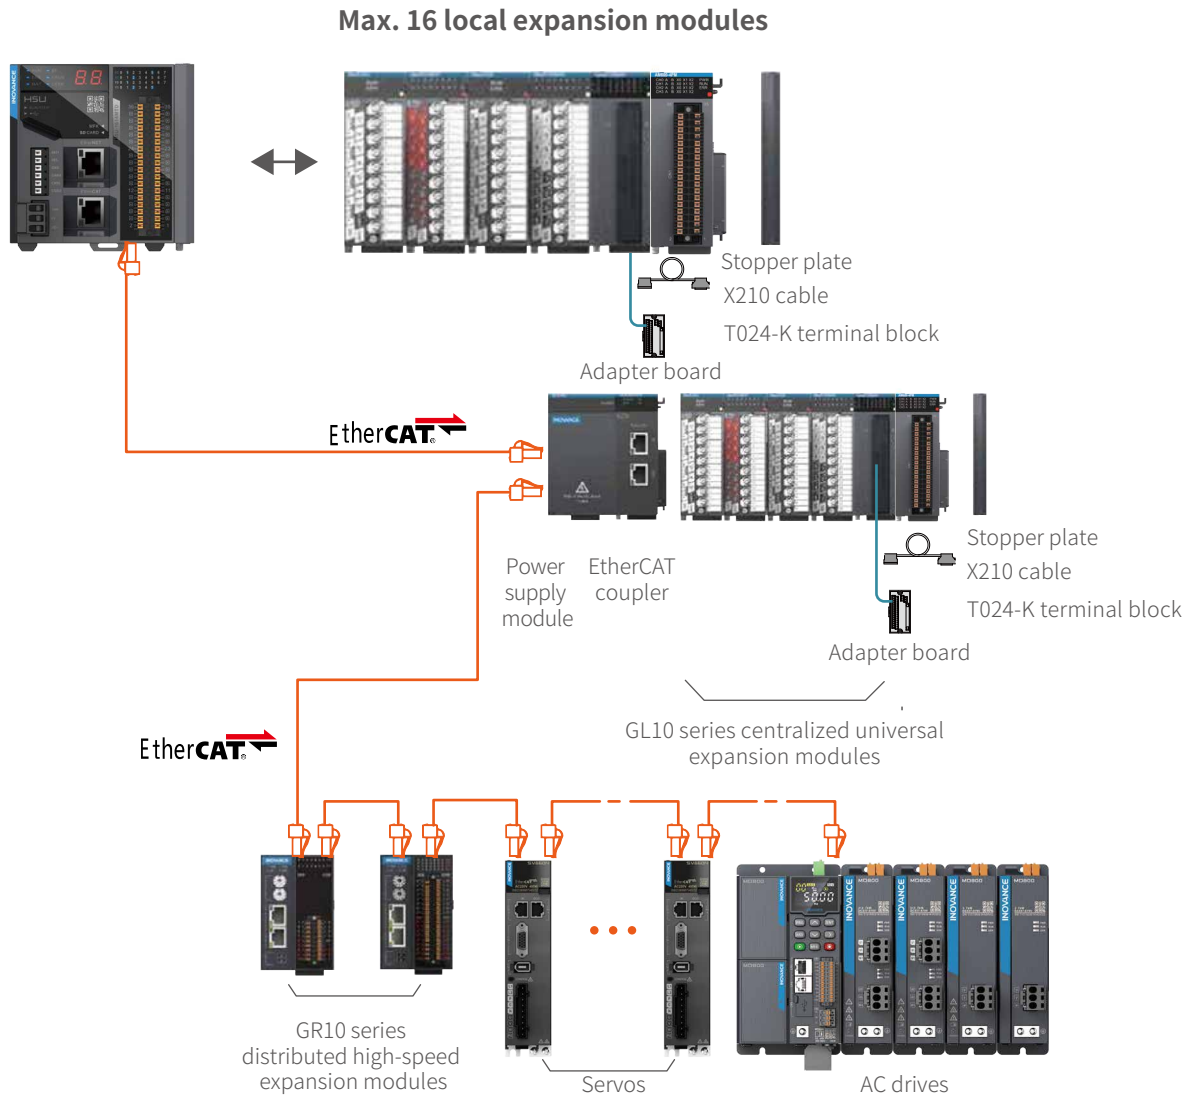

Marking accuracy <math>\pm 1\text{ mm}</math>

Production speed: dual-tool 110 bag length > 300 bags per second

Other functions: empty package detection, material cutting detection, material cutting reversion, automatic film connecting, etc.

# H3U Series

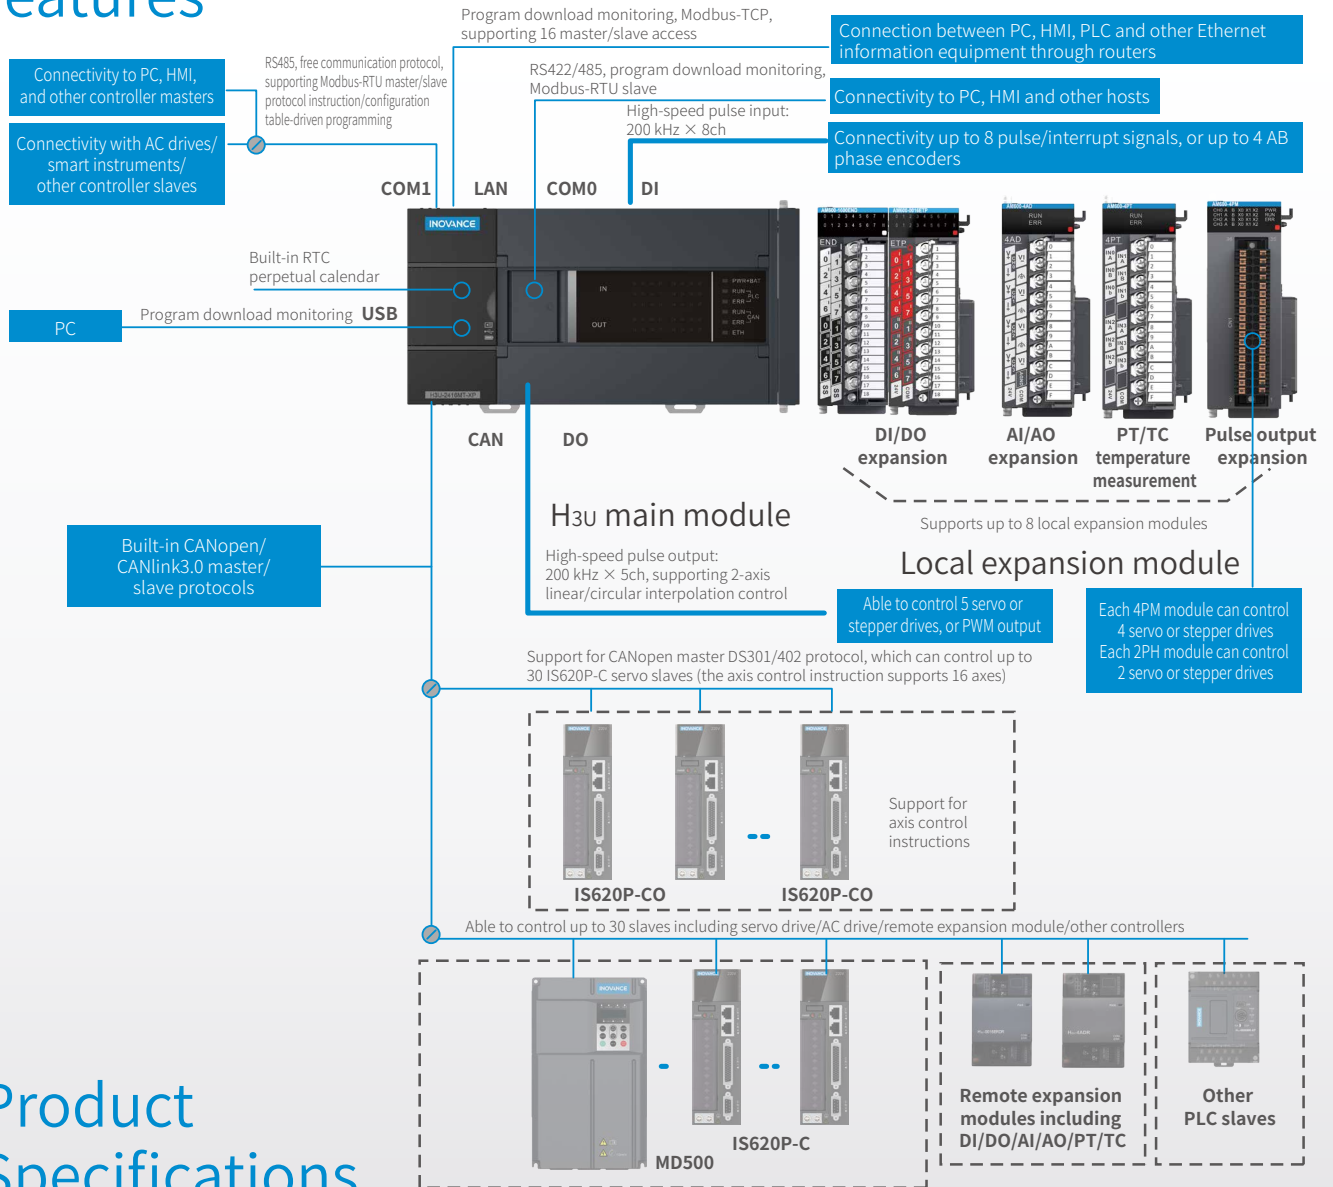

## CAN bus high-performance small PLC

- Eight 200 k high-speed pulse inputs.
- Five 200 k high-speed pulse outputs; more positioning instructions; support for S-curve acceleration and deceleration.
- Two-axis arc and linear interpolation high-speed output.
- Separate serial communication interfaces COM0 and COM1; support for USB monitoring download.
- The main module provides an Ethernet interface which supports Modbus-TCP.
- The main module provides a CAN communication interface which supports CANopen and CANlink protocols.
- 64 k-step program flash memory without any battery.
- Power failure retention register: 32k words for the R element and 8k words for the D element, no battery is needed.
- 150% increase in overall scanning speed compared with H2U-XP.
- Supports up to 8 GL10 expansion modules.
- Support 8 external interrupt inputs.
- Over 120 new instructions, including floating point calculation, data block processing, matrix processing, character string processing, and positioning instructions.
- Super bright blue LED indicator.

# Features

# Product Specifications

Model	H3U series high-performance CAN bus small PLC (mainly for CANlink axis motion control and Ethernet communication)
Axis capacity	Up to 16 axes (CANlink or CANopen axis) + 5 pulse axes + 4 GL10-4PM expansion modules (or 4 GL10-2PH)
communication port	EtherNet, CAN, RS485 (one), RS422 (one), USB
CAN communication	Support for CANlink and CANopen axis control instructions
Program capacity	64K steps
Data capacity	48K word
Storage capacity in case of a power failure	40K word
Basic instruction rate	Logic instructions: 100 ns, floating point operation: 4 us
High-speed Input	200K (8)
High-speed output	200k (5 outputs), S-curve acceleration and deceleration (MR models do not support high-speed output; 6P models are 6-axis supporting CAN communication.)
System time	Supported
Interpolation	2-axis arc and 2-axis straight line
Electronic cam	Not recommended (Cam is recommended for medium-sized PLCs.)
Terminal Type	Removable screw terminal
Local module expansion	Supports up to 512 local expansion I/O points: the number of points is calculated according to the number of local expansion modules (max. 8 local expansion modules, including I/O modules and special expansion modules)
Dimensions	L * W * H = 170 * X * 90 * 90

# H3U Applications

## National Day parade floats

### The ultimate test of the stability of H3U axis control

National Day parade floats: as the central controller of the whole vehicle, Inovance's H3U small PLC, which controls IS620P servo drives through CANlink axis control instructions, has proved its stability in extreme conditions.

## Curved screen laminating machine

### CANlink point control brings supreme performance

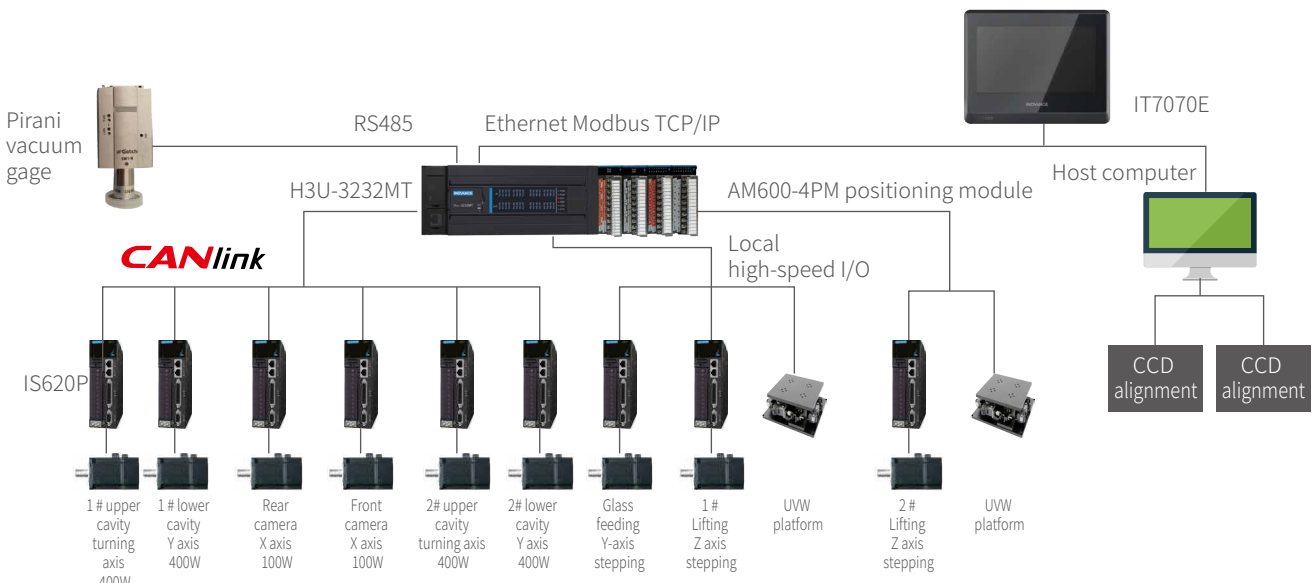

6-axis CANlink axis control through CANlink, and 9-axis pulse control through high-speed output and a 4PM module. Free switchover between film laminating for curved glass back covers, curved glass touch screens and screen protectors.

**Applicable to:** 5" to 5.5" curved glass back covers and curved glass touch screens

**Accuracy:**  $\pm 0.05$  mm

**Quality requirements:** No bubbles should be present on the edge of the product

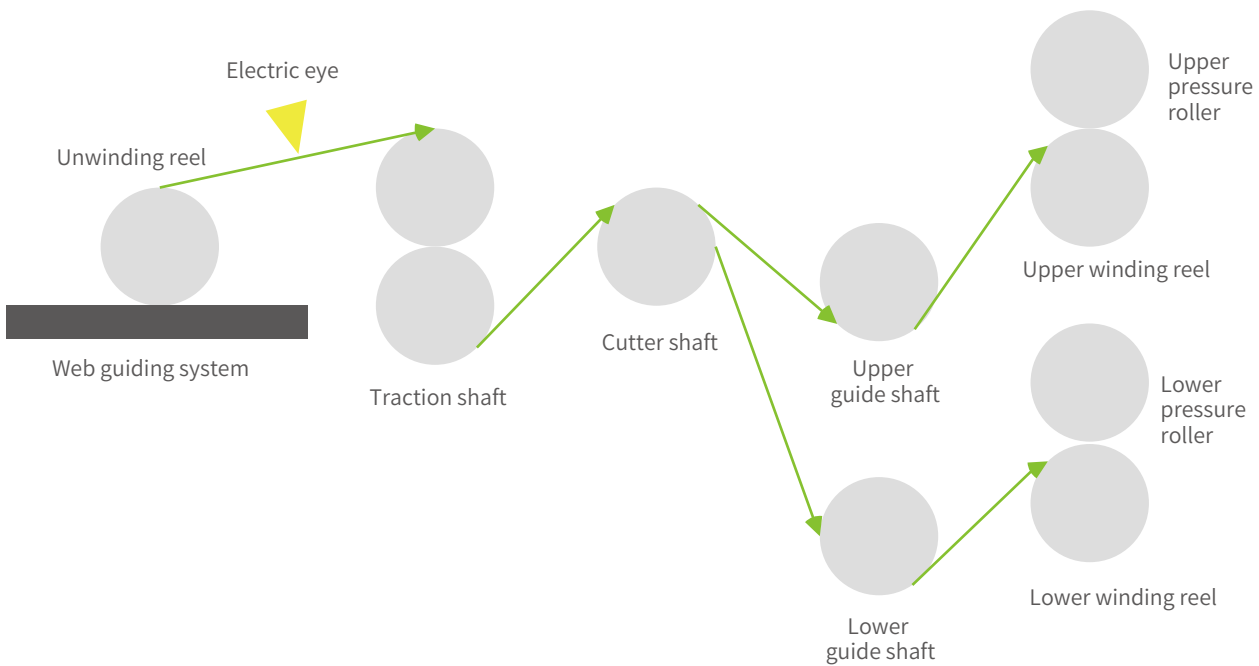

**Production capacity:** 150 p/1 h

## High-speed cutting machine

# CANlink axis control superposition tension control algorithm enables fast operation

Based on the CANlink bus, this solution uses an H3U small PLC integrated with a tension control algorithm function block to control 5 servo drives and 2 AC drives, simplifying wiring and commissioning.

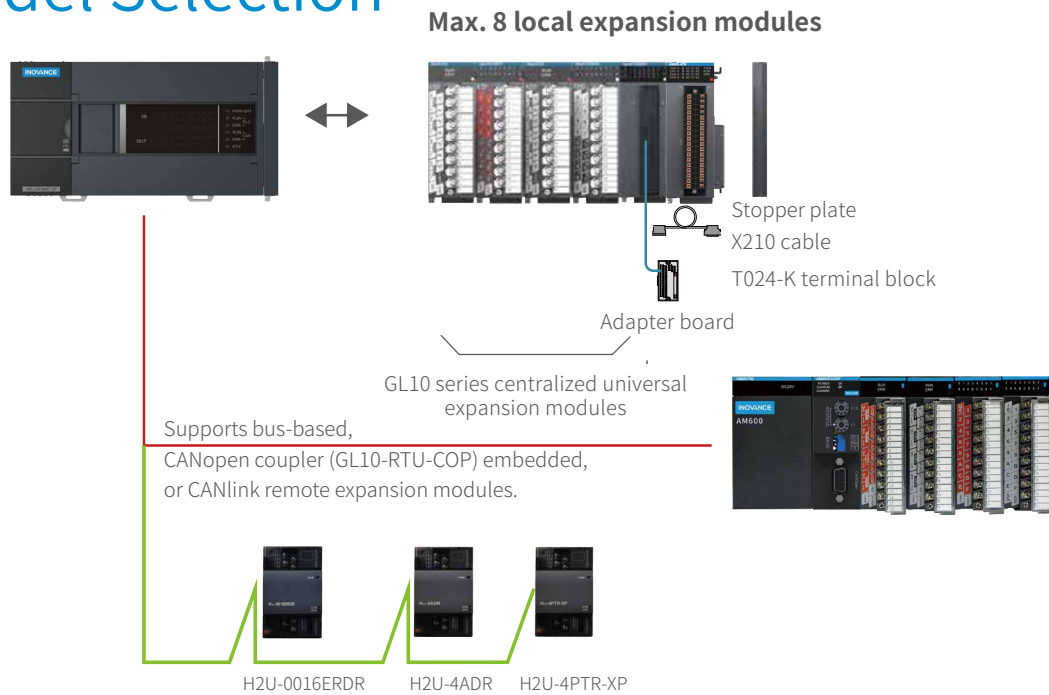

### Performance

400 m/min: acceleration 25s, deceleration 15s  
Rewinding and unwinding tension fluctuation:  
 $\pm 2$  N, traction:  $\pm 1$  N

For details about other temperature control, weighing, and Ethernet to serial modules, please contact Inovance technical support.

# H2U Series

## General-purpose small PLC

- Provides multi-channel high-frequency high-speed input and output ports, which allow for various motion and positioning control functions.
- Three separate serial communication ports COM0-COM2; support for USB monitoring download and CANlink3.0 networking.
- A variety of communication protocols and communication instructions to facilitate system integration.
- Provides encrypted download and upload of user programs and subroutine encryption to protect the user's intellectual property.
- 16k-step program storage capacity
- Fast computation; 127 subroutines; 4 encryption subroutines and 21 interrupt subroutines; user programs and power failure retention elements are permanently saved under in case of power failure.
- Built-in large-capacity power supply for sensors, HMI, and external auxiliary relays.

### Powerful

- Support for various external events and external control needs; powerful data computing capability.

### Customizable

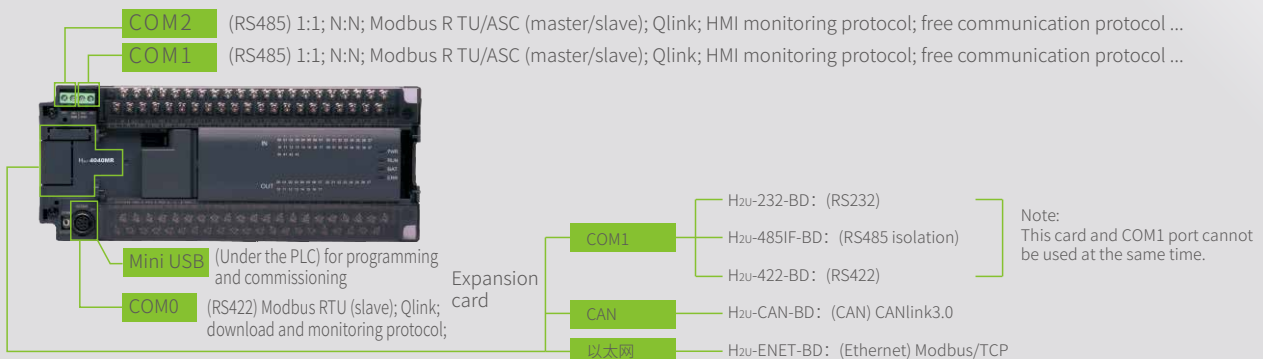

- Complex instructions are introduced using a wizard, and communication is achieved using configuration table.

### Expandable

- The expansion module supports various sensors.
- 256 I/Os can be expanded.
- 32 remote modules can be expanded.

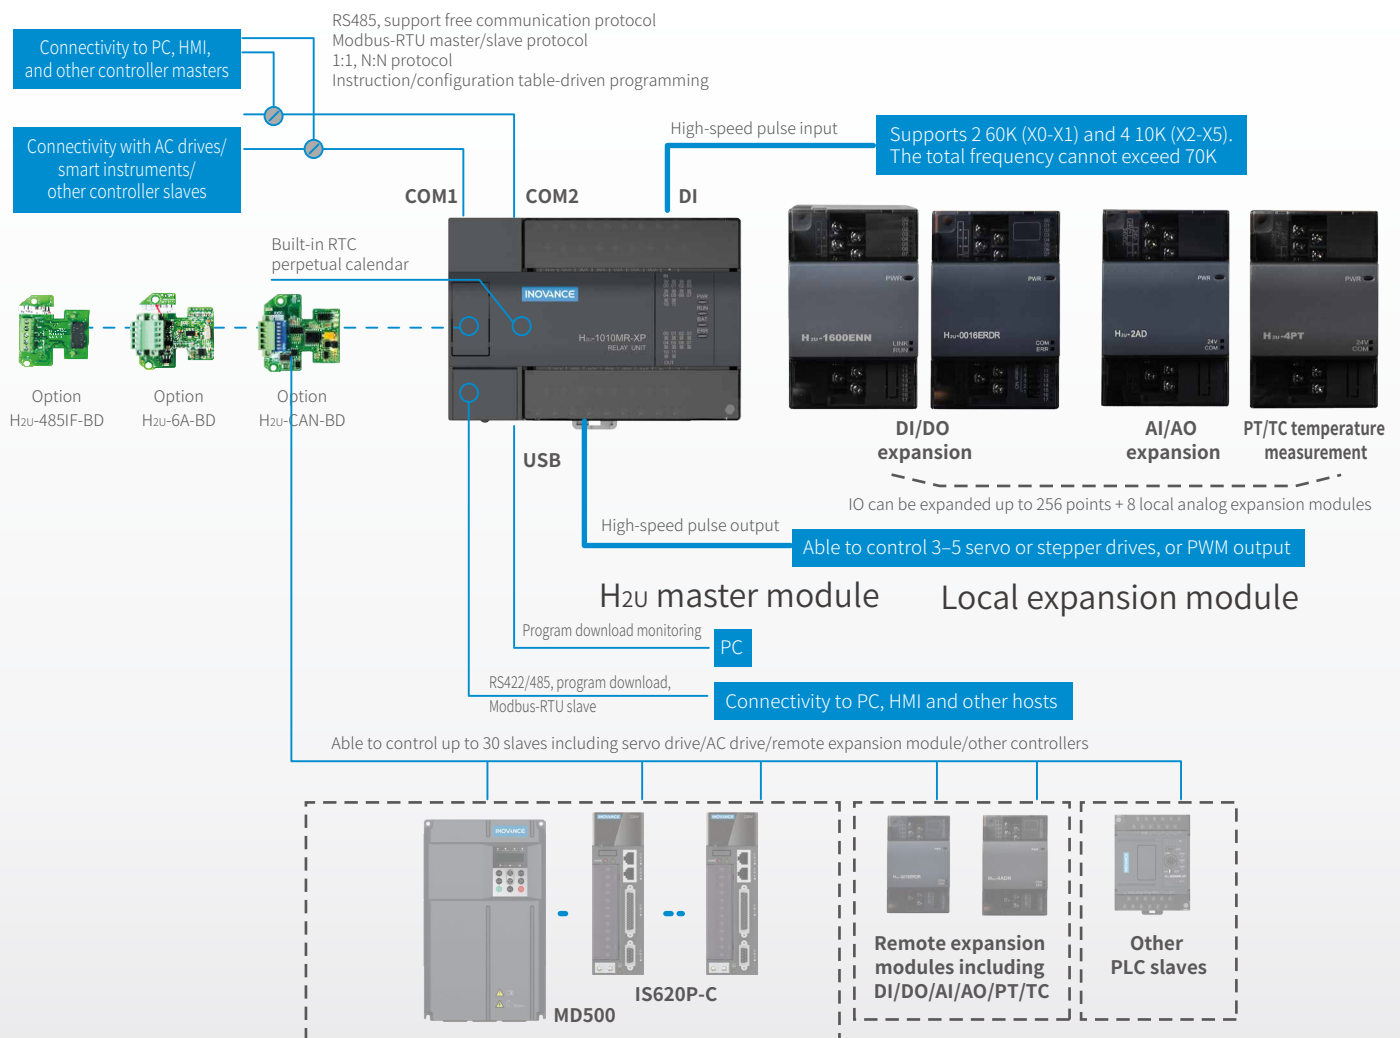

## Various Communication Interfaces

Support for a variety of communication protocols reduces costs.

Note: With the Qlink protocol, Inovance's HMI and PLC will automatically communicate at high speed without special setting by the user.

# Application Topology

# Product Specifications

Model	H2U series general-purpose small PLC
Axis capacity	3 pulse axes
communication port	RS485 (2), RS422 (1)
CAN communication	Supports CAN card
Program capacity	16K steps
Data capacity	10K word
Storage capacity in case of a power failure	8K word
Basic instruction rate	100ns
High-speed Input	Supports two 60K (X0-X1) and four 10K (X2-X5). The total frequency cannot exceed 70K (except for MTP, MTQ)
High-speed Output	Three 100K (relays and MTP models not supported), S-curve acceleration or deceleration not supported (Note: MTP models have 8 100K high-speed pulse outputs and no high-speed input.)
System time	Supported
Expansion card	Support function expansion card
Local module expansion	Max. 8 I/O modules and special modules
Terminal type	Removable
Remarks	You can connect the 24V terminal reversely for a 24V power supply
Dimensions	L * W * H = 130 * X * 88 * 90

# Model Selection

## H2U Local Expansion

## H2U Remote Expansion

## A Variety of Expansion Functions (Expansion Cards)

Note: Expansion cards (232, 485, and 422) of H1U and H2U series occupy port COM1, that is, COM1 is unavailable when the expansion cards are used; CAN and analog expansion cards can use the serial port and do not occupy COM1.

H2S series economical general-purpose small PLC evolved from H2U series.  
 Suitable for all non-standard automation control applications requiring cost-efficiency

Program Capacity	Data Capacity	CAN Card	System time	Terminal Type	Function Expansion Card	RS485 Interfaces	Local Expansion
H2U-XP	16k	Supported	Supported	Removable	Supported	2	8 special modules
H2S	8k	Not supported	Not supported	Unremovable for 20-point and 32-point models	Supported	1	4 special modules

Note: H2S does not support CAN or Ethernet expansion cards.

	01023006	H2U-6B-BD	Controller option-H2U-6B-BD-PLC expansion card-4 current (0-20 mA) inputs-2AO	-
	01023007	H2U-6A-BD	Controller option-H2U-6A-BD-2 voltage inputs-2 current inputs-2AO expansion card	-
	01023008	H2U-CAN-BD	Controller option-H2U-CAN-BD-PLC expansion card-CAN isolation communication card	-
	01023009	H2U-485IF-BD	Controller option-H2U-485IF-BD-PLC expansion card-RS485 isolation communication card	-
	01023022	H2U-ENET-BD	Controller option-H2U-ENET-BD-PLC Ethernet expansion card-PLC Ethernet communication card	-
	01023013	H2U-EXP-CAB	Controller option-H2U-EXP-CAB-expansion module extension cable	-
	01023010	H2U-BAT	Controller option-H2U-BAT-PLC battery	-

## Options of H2U Series Controller

Series	Code	Model	Description	Certification
Options of H2U series controller	01023020	H2U-2DC	Controller option-H2U-2DC-2 DIFF-to-collector output conversion card (independent hardware that converts DIFF signals to collector signals, applicable to all PLCs)	-

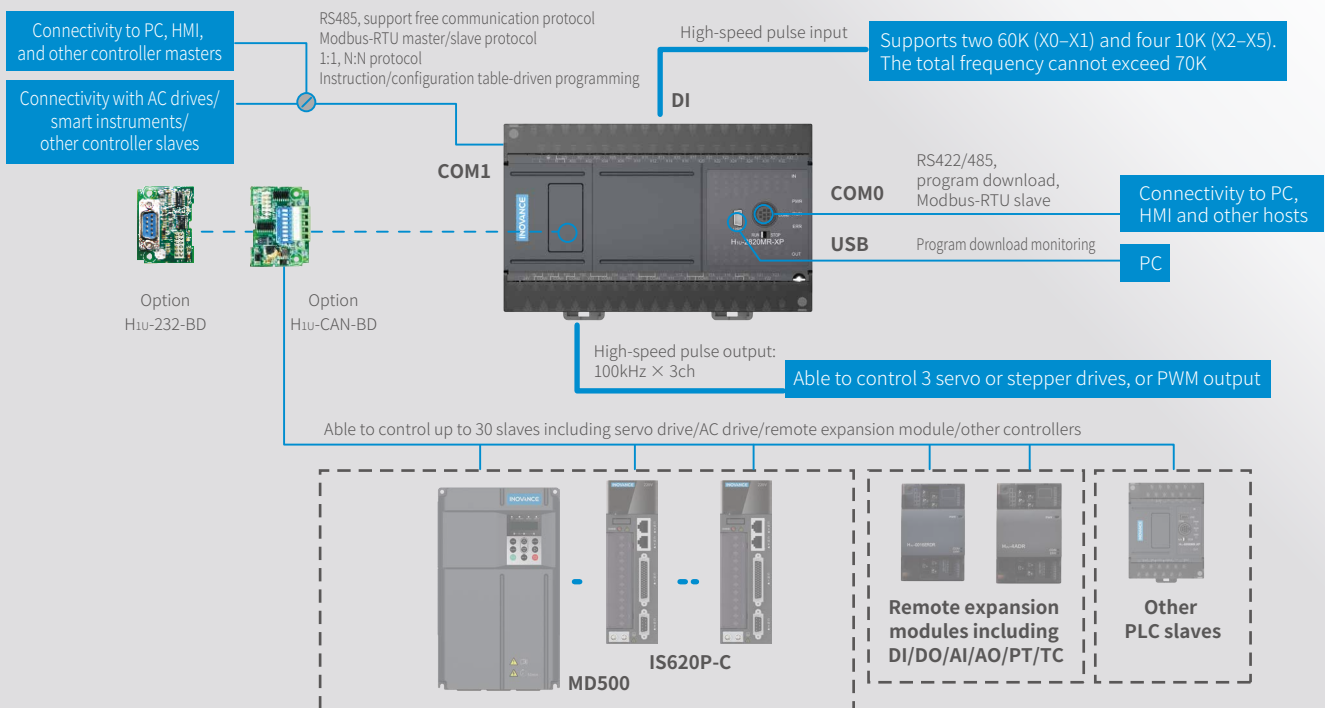

# H1U Series

## Simplified small PLC

- Provides multi-channel high-frequency high-speed input and output terminals which enable various motion and positioning control functions.
- Two separate serial communication ports, support for USB monitoring download, and various communication protocols.
- Powerful networking capability, supporting CANlink3.0 networking, and providing Modbus instructions to facilitate system integration.
- Provides communication setting function which is normally found in medium-sized PLCs.
- Complete encryption function to protect users' intellectual property rights.
- 16k-step program storage capacity
- The user program and all power failure retention elements are permanently saved in case of power failure.
- The real-time clock is maintained for at least a week when power is off, and no battery is required.

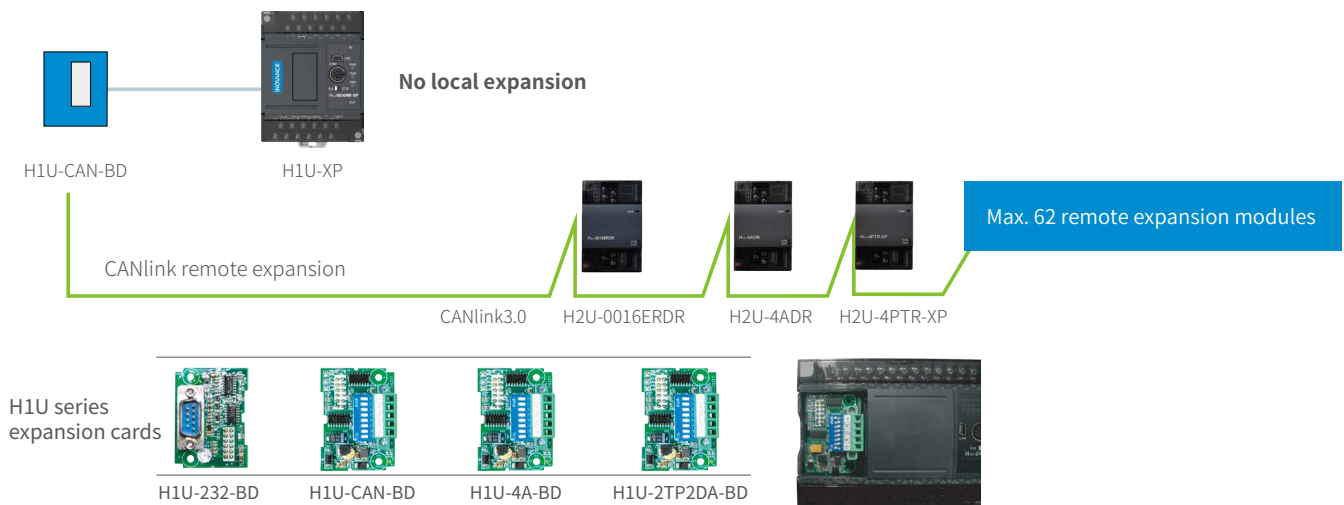

## Application Topology

# Product Specifications

Model	H1U series simplified small PLC
Axis capacity	3 pulse axes
Communication port	RS485 (1), RS422 (1), USB
CAN communication	Supports CAN card (an H1U-CAN-BD expansion card is required for remote expansion)
Program capacity	16K steps
Data capacity	10K word
Storage capacity in case of a power failure	8K word
Basic instruction rate	100ns
High-speed Input	Supports two 60K (X0-X1) and four 10K (X2-X5). The total frequency cannot exceed 70K
High-speed Output	Three 100K, S-curve acceleration and deceleration are not supported
System time	Supported
Expansion card	Support function expansion card
Local module expansion	Not supported
Terminal type	Removable
Dimensions	L * W * H = 70 * X * 75 * 90

## Model Selection

H1S series simplified economical small PLC evolved from H1U series.

## Suitable for logic control of individual equipment

Program Capacity	Data Capacity	CAN Card	System Time	Terminal Type	Function Expansion Card	Supported Point Models
H1U-XP	16k	Supported	Supported	Removable	Supported	All series
H1S	8k	Not supported	Not supported	Unremovable for models of 30 points and below	Supported	All series

Note: H1S does not support CAN expansion cards.

# H0U Series

## Display and controller integrated multi-function small PLC

- A controller integrating a PLC and display.
- Support for 6 high-speed inputs and 2 high-speed pulse outputs (transistor output).
- 2 serial RS485 communication ports and 1 USB port.
- Up to 25 customizable function keys.
- Program download tool: AutoShop for PLC and HTodEditor for TOD.

## Features

USB Client

For programming and commissioning

COM2

(RS485) 1:1; N:N;  
Modbus RTU/ASC (master/slave) ; Qlink, computer communication protocol, free communication protocol, etc.

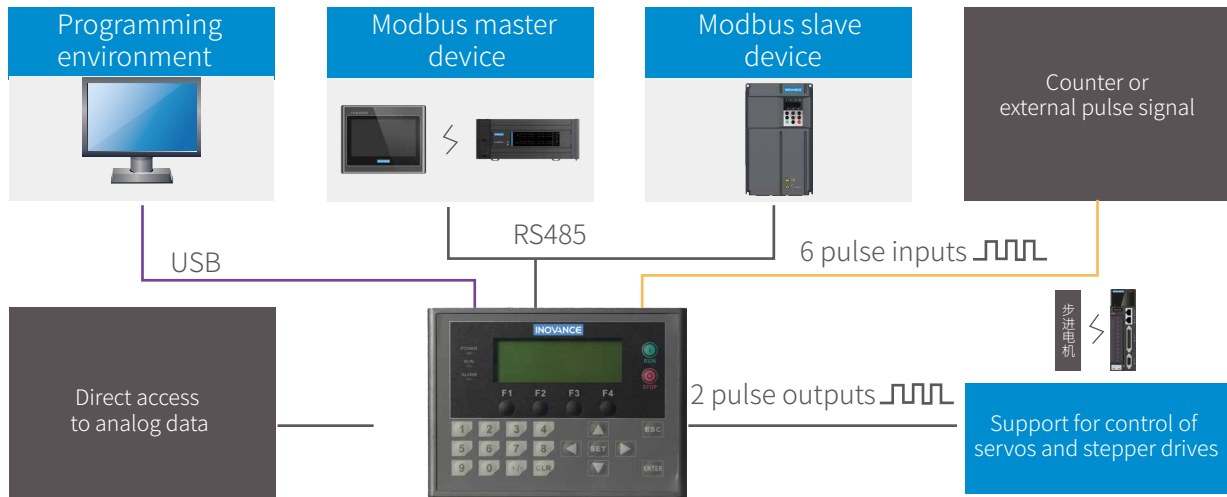

COM1

(RS485) 1:1; N:N;  
Modbus RTU/ASC (master/slave) ; Qlink, computer communication protocol, free communication protocol, etc.

## Product Specifications

Model	H0U series display and controller integrated multi-function small PLC
Axis capacity	2 pulse axes
Communication port	RS485 (2), USB
Program capacity	8K steps
Data capacity	10K word
Storage capacity in case of a power failure	8K word
Basic instruction rate	100ns
High-speed Input	Supports two 60K (X0–X1) and four 10K (X2–X5). The total frequency cannot exceed 70K
High-speed Output	2 high-speed pulse outputs (transistor output). S-curve acceleration and deceleration are not supported
System time	Supported
Local module expansion	Not supported
Remarks	1-with text function (H1U-CAN-BD can be used for CAN communication. If you need the CAN function, please specify it clearly when ordering) 2--6AT is non-standard. See the manual for details
Dimensions	L * W * H = 240 * 53 * 180

	01029029	H2U-8A91G-XP-SAP	PLC-H2U-8A91G-XP-SAP-H2U series general-purpose air compressor controller main module (neutral logo) (with temperature, pressure, three-phase current, and phase sequence detection functions added based on the H2U general-purpose models)	

# expansion module

## GL Series centralized universal module

Supports EtherCAT bus. Support communication between the expansion bus and the EtherCAT bus through a protocol conversion coupler.

- Support local expansion of H3U, H5U, AM400, and AM600
- Provides a power supply module for better anti-interference
- Can be freely combined with functional modules to form a modular I/O system adapted to field needs
- Covers a full range of expansion modules including digital, analog and temperature measurement modules
- Suitable for centralized applications with a large number of points (256 points, or 16 function modules)

## GR series distributed high-speed module

Supports EtherCAT bus. Simplified system construction and maintenance without any power supply module saves costs and time for customers.

- Provides hybrid digital modules for both input and output
- Provides high-speed pulse positioning and high-speed count modules
- Provides a rotary DIP switch to set a station number that is independent of the position
- Less wiring is required and is particularly suitable for distributed applications

### Seamless connection with third-party standard EtherCAT masters

- Adapted to EtherCAT masters such as Omron NX, NJ series, Beckhoff CX series, and Keyence KV series.

### Stable and reliable

- Widely used by customers in the lithium battery, silicon crystal, mobile phone, and packaging industries, including AAC, Luxshare Precision, BOE, Lens Technology, and BYD.

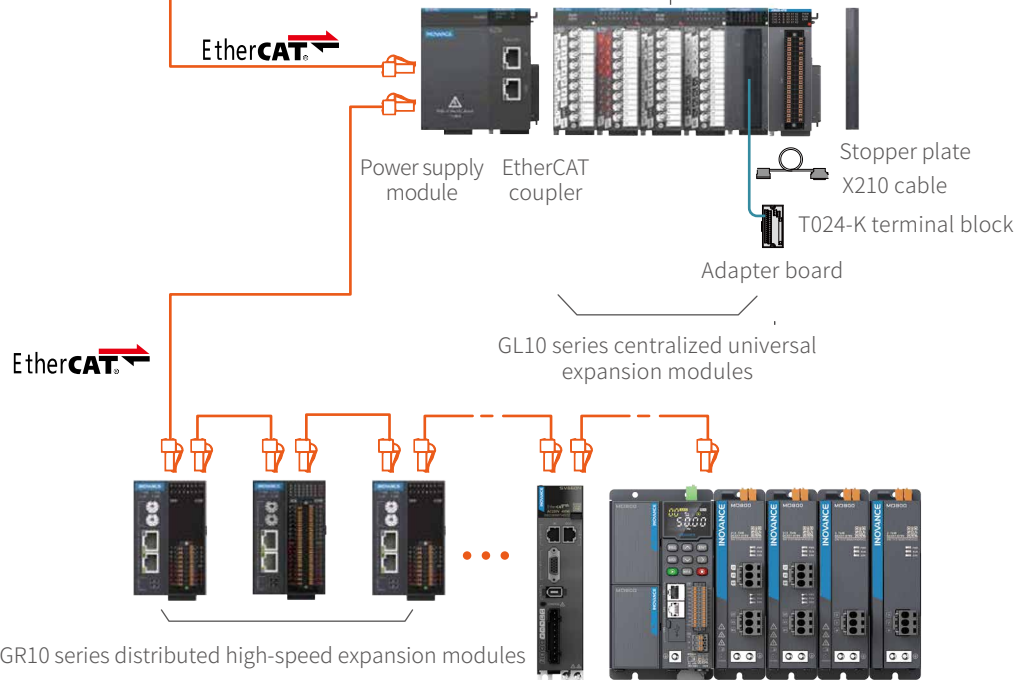

# Model Selection

220V UPS  
(power failure retention)

**Centralized Universal Module**

Running on an open EtherCAT bus, this type of module can be flexibly used with function modules to form a modular I/O system. The expansion bus is able to communicate with the EtherCAT bus through a protocol conversion coupler.

**Distributed High-Speed Modules**

Running on an open EtherCAT bus, this type of module works in a one-stop way, with no need for additional power supply modules. The system construction and maintenance are simple, which saves costs and time of customers.

Difference between AM600 series 32-point module wiring and GL10 series 32-point module wiring

AM600-0032/3200: used with an external terminal block

GL10-0032/3200: used with its own terminal block

# Product Specifications

Category	Model	Description	Terminal Type
GL10 series power supply module	GL10-PS2	GL10 series local expansion module, power supply module, used to power AM series PLCs or ECTA couplers	Screw
GL10 series coupler module	GL10-RTU-ECTA	EtherCAT coupler, max. 16 I/O expansion modules, used with modules including GL10-3200END and 4TC, support for auto scanning	Screw
	GL10-RTU-COP	CANopen coupler, supporting up to 16 I/O modules	
GL10 centralized expansion module (connected to ECTA coupler or PLC for I/O expansion)	GL10-1600END	GL10 series local expansion module, 16DI, 24 VDC input (source or sink)	
	GL10-3200END	GL10 series local expansion module, 32DI, 24 VDC input (source or sink)	Crimped
	GL10-0016ETN	GL10 series local expansion module, 16DO, transistor output (sink), max. current 500 mA@24 VDC	Screw
	GL10-0016ETP	GL10 series local expansion module, 16DO, transistor output (source), max. current 500 mA@24 VDC	Screw
	GL10-0016ER	GL10 series local expansion module, 16RO, rated current 2 A@250 VAC	Screw
	GL10-0032ETN	GL10 series local expansion module, 32DO, transistor output (sink), max. current 500 mA@24 VDC	Crimped
	GL10-4AD	GL10 series local expansion module, 4AD, voltage or current analog input, 16-bit resolution, 0.1% error, 2 ms sampling period	Screw
	GL10-4DA	GL10 series local expansion module, 4DA, voltage or current analog output, 16-bit resolution, 0.1% error	Screw
	GL10-4PT	GL10 series local expansion module, 4-channel RTD module, 24-bit, used with thermal resistors including PT100, PT1000, and Ni1000, 0.1°C resolution	Screw
	GL10-4TC	GL10 series local expansion module, 4-channel TC TEMP MEAS module, 24-bit, used with thermocouples including types J, K, R, and S, 0.1°C resolution	Screw
	GL10-8TC	GL10 series local expansion module, 8-channel TC TEMP MEAS module, 24-bit, used with thermocouples including types J, K, R, and S, 0.1°C resolution	Screw
	GL10-4PM	GL10 series local expansion module, 4-channel (200 kHz each) single-ended signal positioning output module (used only with H3U models)	Crimped
	GL10-2PH	GL10 series local expansion module, 2 (4 MHz each) DIFF outputs (used only with H3U models)	Crimped

Category	Model	Description	Terminal Type
GR10 series distributed expansion module (connected to the EtherCAT bus as a slave)	GR10-0808ETNE	GR10 series EtherCAT high-speed expansion module, 24 V, integration of communication and I/O, refresh at min. 500 us interval	Crimped
	GR10-1616ETNE	GR10 series EtherCAT high-speed expansion module, 24 V, integration of communication and I/O, refresh at min. 500 us interval	Crimped
	GR10-4ADE	GR10 series EtherCAT high-speed expansion module, 4-channel high-speed AI module, refresh at min. 500 us interval	Crimped
	GR10-4DAE	GR10 series EtherCAT high-speed expansion module, 4-channel high-speed AO module, refresh at min. 500 us interval	Crimped
	GR10-8TCE	GR10 series EtherCAT high-speed expansion module, 8-channel high-speed thermocouple signal detection module, refresh at min. 500 us interval	Crimped
	GR10-4PME	GR10 series EtherCAT high-speed expansion module, 4-channel (200 kHz each) single-ended signal positioning output module, refresh at min. 500 us interval	Crimped
	GR10-2HCE	GR10 series EtherCAT high-speed expansion module, 2-channel ABZ high-speed counting module, 2 probes per channel, refresh at min. 500 us interval	Crimped
	GR10-2HCE-2M	GR10 series EtherCAT high-speed expansion module, 2-channel ABZ high-speed counting module, 2 probes per channel, refresh at min. 500 us interval	Crimped
	GR10-8PBPE	GR10 series EtherCAT high-speed expansion module, 1-channel ABZ high-speed counting module, 8 probes, refresh at min. 500 us interval	Crimped
	GR10-2PHE	GR10 series EtherCAT high-speed expansion module, 2 (4 MHz each) DIFF outputs, refresh at min. 500 us interval	Crimped
	GR10-4TCS-PID	GR10 series EtherCAT high-speed expansion module, AI-70482D7, 4 TC input TEMP controller	Screw
	GR10-4PTS-PID	GR10 series EtherCAT high-speed expansion module, AI-70482D7, 4 resistance input TEMP controller	Screw
	GR10-EC-6SW	GR10 series EtherCAT high-speed expansion module, 6-point-EtherCAT branch module, supporting multiple serial and parallel connections	

EOM Notice: AM600 series models except AM600-0032 and AM600-3200 have reached EOM. (The AM600 series ordering information still includes AM600-0032 and AM600-3200.)

1. Local expansion modules GL10-XXX and AM600-XXX connected to ECTA or PLC have the same electronic tag (identical software and hardware but different silkscreen), therefore they are interchangeable. For example, a GL10-1600 can directly replace an AM600-1600 module.
2. The AM600 and GR10 ECTA modules have a different identification code and default values from other individual EtherCAT (remote) modules. Therefore, they are uninterchangeable.
3. I/O hardware wiring of AM600-0032 and AM600-3200 requires adapter boards, while that wiring on GL10-0032 and GL10-3200 uses terminal blocks of the controllers. Pay attention to the wiring difference during the interchange.
4. The crimped terminal block of GR10-4PME has one more ground pin than that of AM600-4PME. Pay attention to the grounding during the interchange.

# IT7000 Series

## High-performance HMI, intelligent process UI platform

- Exquisite information display and smooth operation
- Cover applications from low-end to high-end
- Industry-level manufacturing technology
- Built-in InoTouchPad configuration software with flexible configuration functions and ease of use
- Abundant image resources, programmable UI style, and perfect operation UI
- Support for serial port, Ethernet, and WIFI-based stand-alone and multi-unit network communication
- Support for major PLC and AC drive products, servo communication protocols, and Modbus and ModbusTCP standard protocols
- The HMI screen can be cast to a mobile device such as mobile phone through VNC
- With highly extendable programming interfaces, advanced users can program their own plug-ins and dedicated communication protocols to meet their industry-specific needs

## Attractive and powerful

- High display-to-body ratio
- Slim and light
- 15" aluminum alloy case

# Various Flexible Networking Solutions

- PLC communication solutions of Inovance and other major manufacturers
- Communication between field devices, remote devices and mobile devices through Ethernet and WIFI
- OPC UA-based information system

Protocol	Description
Inovance	All PLC, servo, AC drive, and HMI products
Siemens	Supports s7-200, smart200, s7-1200, s7-1500, s7-300 (supporting S7 Ethernet protocol, PPI is in development)
Mitsubishi	FX1N/FX2N/FX3U/FX3G/FX5U, Q/L series (supporting MC Ethernet protocol and FX computer link protocol)
Omron	CP series, CJ series, NX series, NP series, and NJ series (supporting FINS serial port and Ethernet protocol, EIP is in development)
Panasonic	FP series and FP2 series (supporting serial port protocol, Ethernet is in development)
Yaskawa	CP series, MP2300 (in development)
Keyence	KV series (in development)
Modbus	Standard Modbus equipment
OPC UA	OPC UA Client; Server is not supported
MQTT	Supports standard MQTT protocol
Free communication protocol	Inovance PLCs (H1U/H2U/H3U/H5U) that support free communication protocol, and other third-party devices; supports client and server

# Cross-Platform Configuration Software

The full-featured InoTouchPad, which is used to build a small SCADA host controller system, can run on PCs and IPCs, as well as traditional embedded Linux HMI platforms.

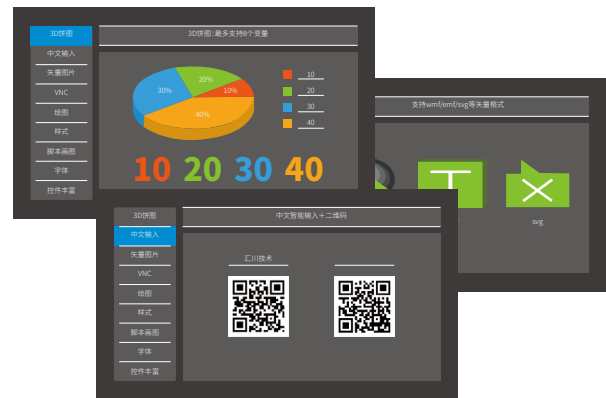

## Flexible expansion

- Graphics, text, data objects can be freely configured into various functions
- Expandable software platform allows users to import customized controls
- Canvas control script to draw graphics freely
- Screen can be cast to a mobile device (mobile phone or tablet) through VNC

## Comfortable interaction

- Support for input and display of all standard characters
- Support for import of most vector and raster images
- 中文输入
- Support for multiple visualizations of statistical data

## Feature-rich

- The G code program can be edited and downloaded to the controller for execution
- Trend chart and oscilloscope functions allow for sampling of the continuous waveform of the slave computer
- Historical data recording allows for saving specified records in an HMI local or extended USB drive or SD card. You can check and search for these records through the data view, and print them by the printer
- The recipe function allows manipulation of multiple nameable recipes

### Series

Economical configuration: 800 x 480, no SD card port, no Ethernet, no RS232 serial port, no panel power indicator  
COM1 (RS422/RS485) USB x 1

Standard configuration: 800 x 480, no SD card port, no Ethernet  
COM1 (RS422/RS485) COM2 (RS232) USB x 1

Advanced configuration: 800 x 480, Ethernet  
COM1 (RS422/RS485) COM2 (RS232) COM3 (RS485) USB x 1

Economical configuration: 1024 x 600, Ethernet  
COM1 (RS422/RS485) USB x 1

Advanced configuration: 1024 x 600, Ethernet  
COM1 (RS422/RS485) COM2 (RS232) COM3 (RS485) USB x 1

Advanced configuration: 1024 x 768, resistive screen, Ethernet  
COM1 (RS422/RS485) COM2 (RS232) COM3 (RS485) USB x 1

### Matching PLC Models

### Note for Use

### Picture

1. Inovance H1U/H2U/H3U: RS422 round communication port
2. Mitsubishi FX1N/2N/3U/3G: RS422 round communication port

This type of cables are used to connect RS422 COM1 ports of IT7000 series touch screens to Inovance H1U/H2U/H3U RS422 communication ports or Mitsubishi FX1N/2N/3U/3G RS422 communication ports.

1. Inovance H1U/H2U/H3U: RS422 round communication port
2. Mitsubishi FX1N/2N/3U/3G: RS422 round communication port

This cable is not recommended. Instead, customers are advised to use customized RS232-to-RS422 cables that can be purchased online. For the details about the pin definitions, see the user manual.

1. For orders already placed, keep the current device communication solution. If the cables have quality problems in use, contact the product line for replacement, or change the cable to IT7-H3U-CAB in the current and subsequent orders. If the cables are changed in orders, modify the device communication scheme in a timely manner.
2. This cable connects to RS232 COM2 of IT7000 series touch screens, while IT7-H3U-CAB connects to RS422 COM1 of IT7000 series touch screens. Pay attention to the protocol difference in the new communication solution.

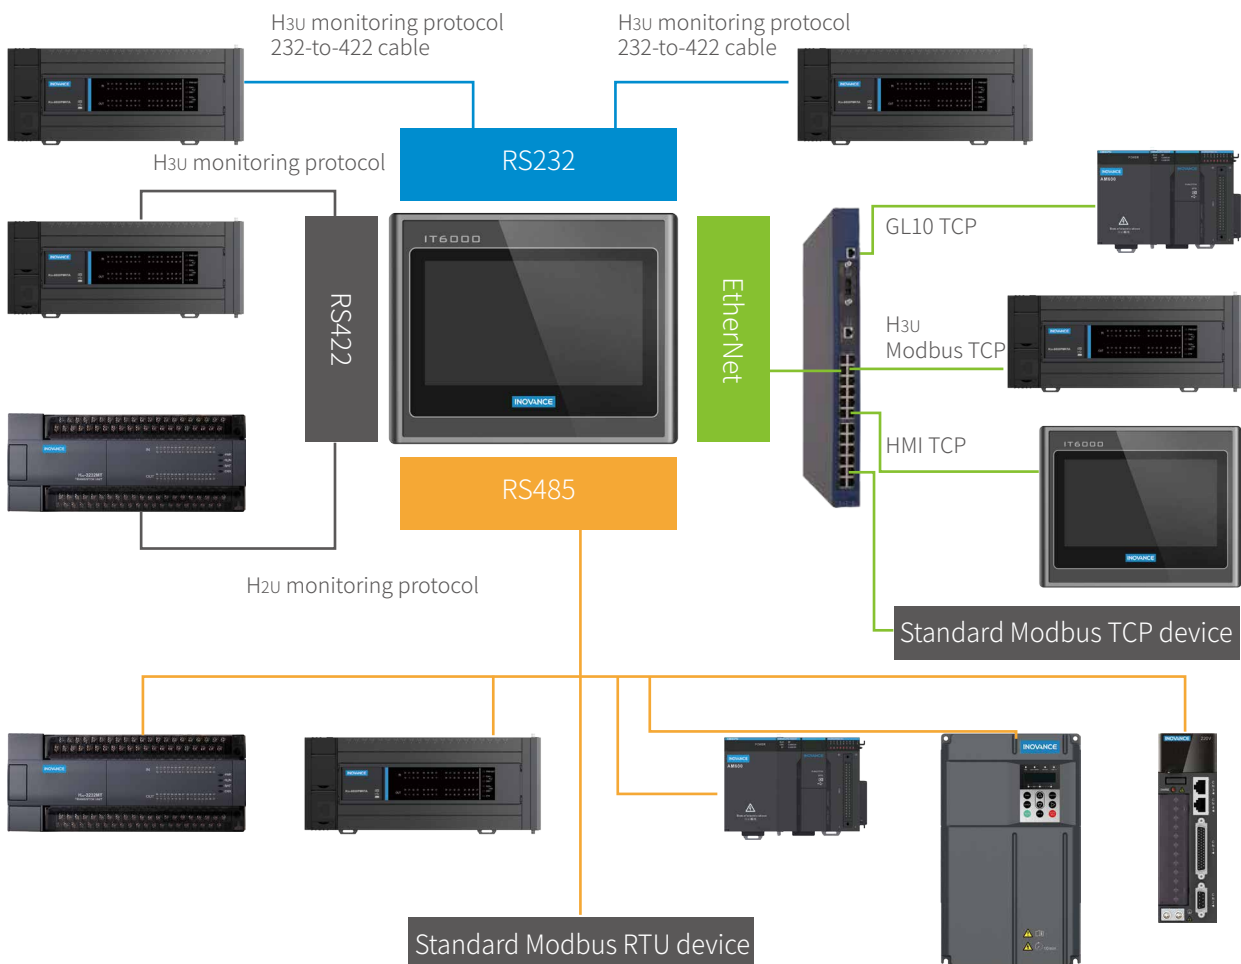

This type of cables connect to IT7000 Mini-USB ports for downloading and are incompatible with Type-B USB ports of IT6000 series.

# IT6000 Series

## General-purpose HMI

- 7" model: TFT display, 800 \* 480, 65535 colors
- 10" model: TFT display, 1024 \* 600, vivid display
- 32 MB user program
- 3 serial ports, 2 USB and LAN interfaces
- The serial port supports standard ModbusRTU master/slave communication protocol
- The proprietary Qlink protocol is automatically enabled for communication with Inovance PLCs
- The Ethernet port supports ModbusTCP master/slave communication protocol
- Direct communication with Inovance PLCs and servo systems
- Built-in major PLC communication protocols of Siemens, Mitsubishi, Omron, Delta and Panasonic
- Process data storage and HMI and PLC program upgrade with a USB drive

# Multi-dimensional networking

- Supports communication networking solutions with all PLCs, AC drives, and servo drives of Inovance
- Supports standard Modbus and ModbusTCP devices, can be either a master or slave
- Supports PLCs of major manufacturers such as Siemens, Mitsubishi, Omron, Delta, and Panasonic

# Import and export

- Recipe data
- Historical data
- Sampling data
- Log
- DXF data

Matching PLC Models	Note for Use	Picture
1. Inovance H1U/H2U/H3U: RS422 round communication port 2. Mitsubishi FX1N/2N/3U/3G: RS422 round communication port	<p>This type of cables connect RS422 COM1 ports of IT6000 series to RS422 communication ports of Inovance H1U/H2U/H3U or RS422 communication ports of Mitsubishi FX1N/2N/3U/3G. The COM1 port of IT6000 is female, and the HMI end of the cable is male. Therefore, directly connect the cable to COM1. This cable is incompatible with IT7000 for the following reasons:</p> <ol style="list-style-type: none"> <li>1. The COM port of IT7000 is male. The HMI end of this cable is male too.</li> </ol> <p>The cable cannot be directly connected to the COM port.</p> <ol style="list-style-type: none"> <li>2. IT7000 COM1 has a different wiring sequence from that of IT6000.</li> </ol>	
1. Inovance H1U/H2U/H3U: RS422 round communication port 2. Mitsubishi FX1N/2N/3U/3G: RS422 round communication port	<p>The product code has been registered but this scheme has risks:</p> <p>Expensive+chip damage due to long-time running+long lead time</p> <p>This cable is not recommended. Instead, customers are advised to use customized RS232-to-RS422 cables that can be purchased online. For the details about the pin definitions, see the user manual.</p>	
	<p>This type of cables connect to IT6000 Type-B USB ports for downloading and are incompatible with Mini-USB ports of IT7000 series.</p>	

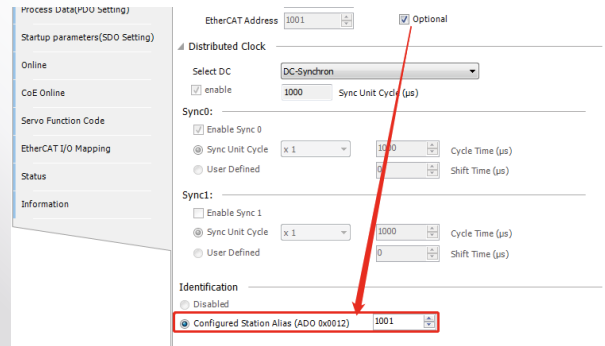

# InoProShop

Suitable for intelligent controllers and medium-sized PLCs

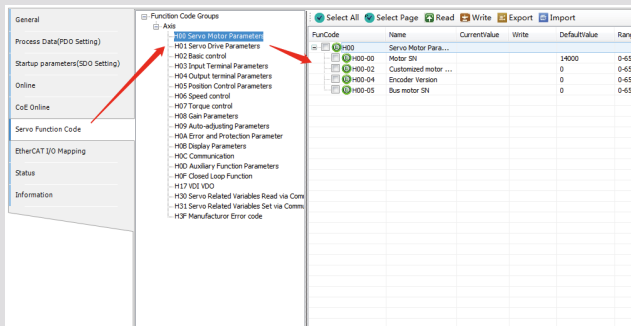

## Auto scan

## Station alias

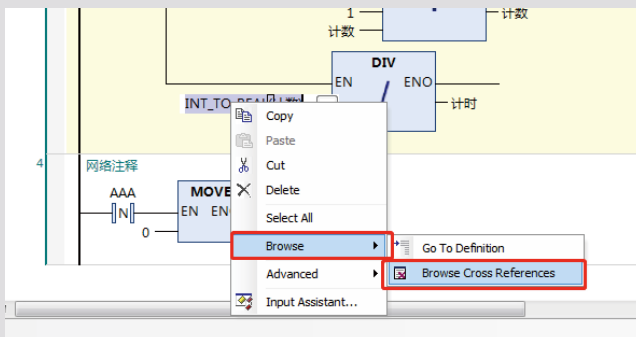

## One-key export and import of axis parameters

## Oscilloscope

## Cross find

## Online modification

## Communication configuration wizard

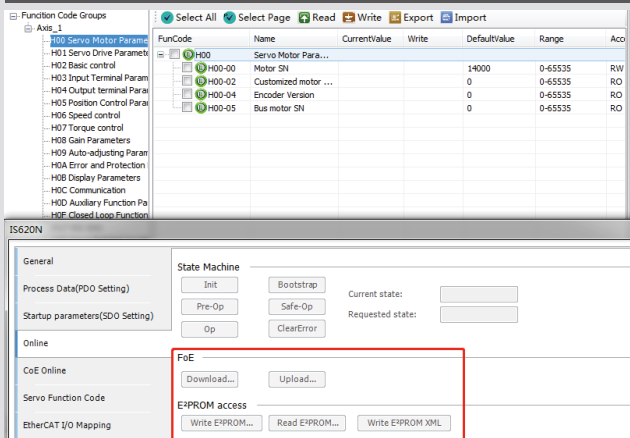

## Built-in industry process libraries

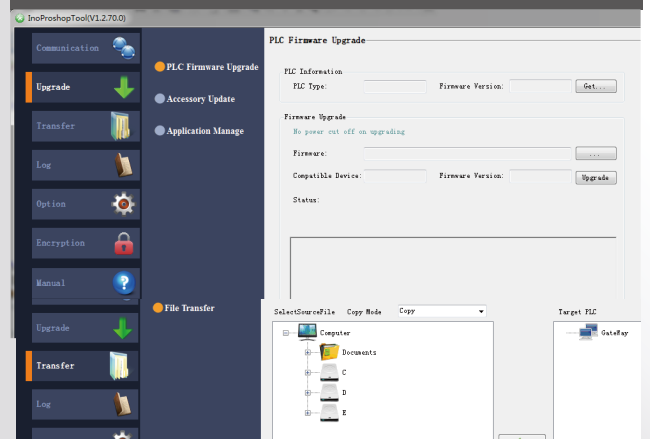

- Variable speed algorithm
- Rewinding and unwinding algorithm
- Web guiding algorithm
- Tension control algorithm
- High-precision color mark tracking algorithm
- Multi-axis synchronization algorithm

## Support for batch alias renaming, batch operation of servo parameters, batch upgrade of the slave XML file, and batch disabling device functions

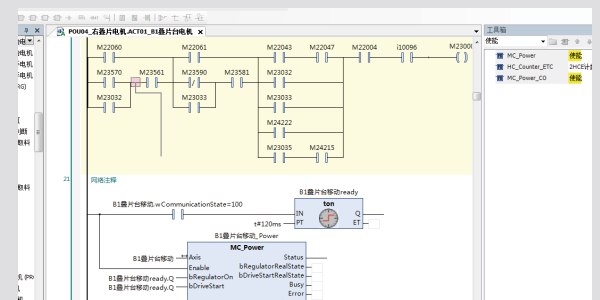

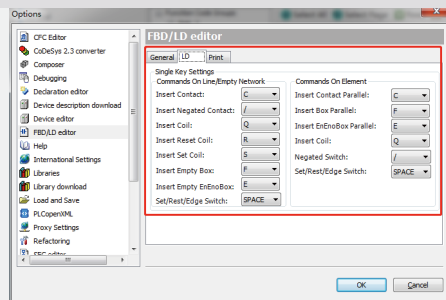

## InoProShopTool

Can be installed separately, and can be used for upgrading PLC firmware and user programs and copying files on a terminal device.

## Easy to use ladder diagram

- Selection
- Copy and paste
- Manual marking
- Function block association
- Drag and drop
- One-button function

# AutoShop

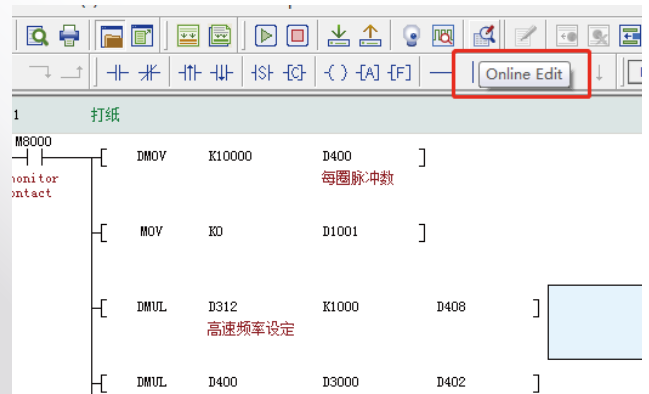

## Suitable for small PLCs

### Communication configuration wizard

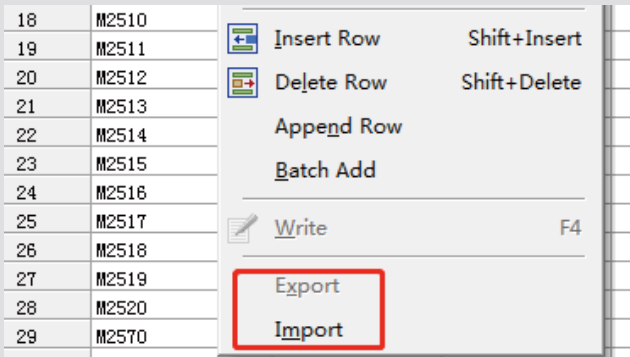

Convenient configuration for serial communication, CANlink3.0, Modbus, and Ethernet

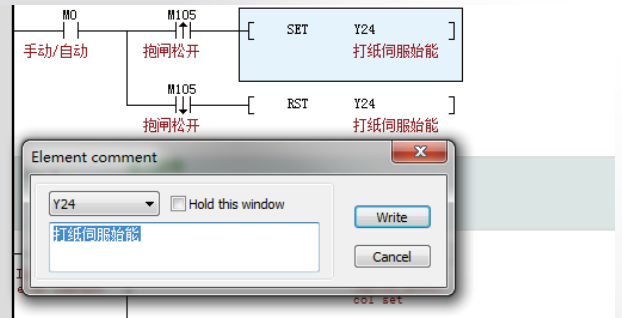

### Online modification

### Import and export of comments

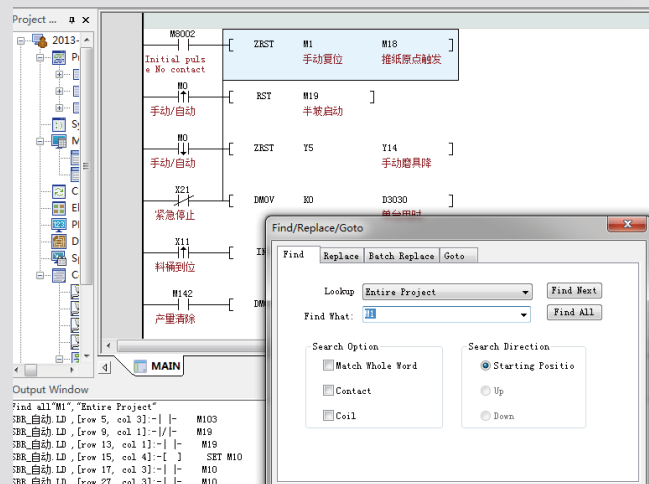

### Easy to use network notes
